

TA-FUS10N-C

Combined control and balancing valves with independent EQM characteristics

Pressurisation & Water Quality › Balancing & Control › Thermostatic Control

ENGINEERING ADVANTAGE

These innovative control and balancing valves for heating and cooling systems combine the key hydronic functions of control and balancing in one valve. Adjustable Kvs and inherent independent EQM characteristics allow correct valve sizing and optimum system controllability. The measuring points enable accurate measurement of flow, differential pressure, temperature and available differential pressure.

Adjustable Kvs

Allows correct Kvs setting corresponding to system requirements.

Independent, inherent EQM characteristic

Proper EQM valve characteristic for all settings.

Self-sealing measuring points

Simple and accurate measurement for balancing, trouble shooting and power measurement.

Actuators

Valves and actuators supplied together ensuring optimum control performance and simplified selection.

Technical description

Application:

Heating and cooling systems.

Functions:

Control (EQM)

Balancing

Pre-setting (Kvs)

Measuring (ΔpV , ΔH , T, q)

Shut-off (for isolation during system maintenance)

Dimension:

DN 32-150

Pressure class:

DN 32-50: PN 16

DN 65-150: PN 16 and PN 25

Max. differential pressure (ΔpV):

DN 32-50: 350 kPa = 3,5 bar

DN 65-150: 400 kPa = 4 bar

Recommended setting range (Kv_{max}):

DN 32: 2,73-12,9

DN 40: 2,97-17,8

DN 50: 8,03-33,0

DN 65: 24,4-65,0

DN 80: 37,5-100

DN 100: 57,4-160

DN 125: 97,4-270

DN 150: 146-400

Important: All values are provisional and may be subject to change. Please check the website for up-to-date information.

Kv_{max} = m³/h at a pressure drop of 1 bar at each setting and fully open valve plug.

Lift:

20 mm

Rangeability:

>100 (for all recommended settings)

Leakage rate:

Tight sealing

Characteristics:

Independent EQM.

Temperature:

Max. working temperature: 120°C

Min. working temperature: -20°C

Media:

Water or neutral fluids, water-glycol mixtures.

(For other media contact TA Hydronics.)

Material:

DN 32-50:

Valve body: AMETAL®

Valve plug: AMETAL®

Seat seal: EPDM/Stainless steel

Spindle seal: EPDM O-ring

O-rings: EPDM

Valve insert: AMETAL®/PPS/PTFE

Springs: Stainless steel

Spindle: Stainless steel

DN 65-150:

Valve body: Ductile iron EN-GJS-400

Valve plug: Stainless steel

Seat seal: EPDM/Stainless steel

O-rings: EPDM

Plug mechanism: Stainless steel and brass

Screws and nuts: Stainless steel

AMETAL® is the dezincification resistant alloy of TA Hydronics.

Surface treatment:

DN 32-50: Non treated

DN 65-150: Electrophoretic painting.

Marking:

DN 32-50: TAH, IMI, DN, PN, DR, serial No and flow direction arrow.

DN 65-150: TAH, IMI, DN, PN, Kvs, T_{min}/T_{max} , serial number, valve body material and flow direction arrow, label.**Connection:**

DN 32-50: Female thread according to ISO 228.

Thread length according to ISO 7/1.

DN 65-150: Flanges according to EN-1092-2, type 21.

Face to face length according to EN 558-1 series 3.

Operating function DN 32-50

Setting DN 32-50

1. Open the valve **fully** with the handwheel.
2. Press the handwheel downwards and turn to desired value, e.g. 5.3.

Shut-off DN 32-50

1. Turn the handwheel to "Closed".

Turn the handwheel to "Open" when re-opening the valve.

Measuring ΔpV and q DN 32-50

Connect TA Hydronics balancing instrument to the measuring points. Input the valve type, size and setting and the actual flow is displayed.

Measuring ΔH DN 32-50

Connect TA Hydronics balancing instrument to the measuring points. Close the valve according to "Shut-off" and measure.

Important! The valve must be re-opened **fully** after the measurement is completed.**NOTE!**

Ensure that the actuator is disengaged from the valve spindle during all operating functions described above.

Operating function DN 65-150

Setting DN 65-150

1. Release the fixing nut.
2. Turn the setting screw to desired value on the scale, e.g. 8.6.
3. Tighten the fixing nut.

Shut-off DN 65-150

1. Release the fixing nut.
2. Turn the setting screw clockwise to stop (position 0 ± 0.5). The presetting is visible on the setting scale.
3. Tighten the fixing nut.

Open to **previous setting** when re-opening the valve.

Measuring ΔpV and q DN 65-150

Connect TA Hydronics balancing instrument to the measuring points. Input the valve type, size and setting and the actual flow is displayed.

Measuring ΔH DN 65-150

Connect TA Hydronics balancing instrument to the measuring points. Close the valve according to "Shut-off" and measure.

Important! The valve must be re-opened to **previous setting** after the measurement is completed.

NOTE!

Ensure that the actuator is disengaged from the valve spindle during all operating functions described above.

Valve characteristics

DN 32-50

DN 65-150

Nominal valve characteristic for all recommended settings.

Measuring accuracy

Maximum flow deviation at different settings

DN 32-50

DN 65-150

Correction factors

The flow calculations are valid for water (+20°C). For other liquids with approximately the same viscosity as water (≤ 20 cSt = 3°E =100S.U.), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves.

This causes a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software TA Select or directly in TA Hydronics balancing instruments.

Noise

In order to avoid noise in the installation the flows must be correctly balanced and the water de-aerated. Very high differential pressures can cause noise in the installations, and in that case, differential pressure controllers should be used.

The maximum recommended pressure drop in order to avoid excessive noise is 200 kPa.

Closing force

Necessary force (F) to close the valve versus the differential pressure (Δp), up to max. Δp .

Kv_{max} values

Important: All values are provisional and may be subject to change. Please check the website for up-to-date information.

	Positions									
	1	2	3	4	5	6	7	8	9	10
DN 32	2,73	3,18	3,79	4,45	5,37	6,51	7,93	9,55	11,1	12,9
DN 40	2,97	3,56	4,40	5,35	6,55	8,30	10,4	12,3	14,8	17,8
DN 50	8,03	9,41	11,4	14,0	16,3	19,0	22,8	27,0	30,4	33,0

	Positions									
	5.5	6	6.5	7	7.5	8	8.5	9	9.5	10
DN 65	12,8	15,0	17,6	20,7	24,4	28,9	34,5	41,8	51,4	65
DN 80	19,6	23,1	27,1	31,8	37,5	44,4	53,1	64,3	79,2	100
DN 100	29,1	34,5	40,8	48,4	57,4	68,6	82,6	101	125	160
DN 125	49,5	58,6	69,4	82,1	97,4	116	140	170	212	270
DN 150	74,5	88,1	104	123	146	173	208	253	314	400

DN 65-150: Recommended setting range 7.5–10 (≈ 40 –100% of Kvs).

Kv_{max} = m^3/h at a pressure drop of 1 bar at each setting and fully open valve plug.

Sizing

When Δp and flow are known, use the formula to calculate

Kv_{max}

$$Kv = 0,01 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/h, } \Delta p \text{ kPa}$$

$$Kv = 36 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/s, } \Delta p \text{ kPa}$$

Example

Flow is 10 m³/h, ΔpV is 35 kPa and control signal (input signal) 0-10 VDC.

1. Go to sizing diagram. (When calculating the Kv_{max} by the formula go directly to step 4).
2. Draw a straight line between 10 m³/h and 35 kPa.
3. Read the needed Kv_{max} value where the line crosses the Kv -axis. In this case $Kv_{max}=16,9$
4. Draw a horizontal line from Kv_{max} 16,9, which will cross the setting bars for all valves which fit the application. In this case DN 40 setting 9,7, DN 50 setting 5,3.
5. Choose the smallest option (with some safety margin). In this case DN 50 is preferable.
6. Go to the selection tables to select the correct set. In this case article number 22106-031050.

Note

If the required flow falls outside the scale of the diagram, the reading can be made as follows: Use the design ΔpV and draw the line to a flow that is 0,1 or 10 times the design flow, getting Kv_{max} in the same relation (either 0,1 or 10 times needed). Following the previous example
 35 kPa and 10 m³/h gives $Kv_{max}=16,9$
 35 kPa and 1 m³/h gives $Kv_{max}=1,69$
 35 kPa and 100 m³/h gives $Kv_{max}=169$

Sizing diagram

DN 65-150: Recommended setting range 7.5–10 (≈40–100% of Kvs).

Installation

Application examples

2-way direct circuit

Injection circuit

Normal pipe fittings

Avoid mounting taps and pumps immediately before or after the valve.

Installation recommendation for accurate measurement due to distortion of fully developed turbulent flow profile.

Installation of actuator

Approx. 140 mm of free space is required above the actuator.

Enclosure class

Automatic operation: IP 54

(Manual operation TA-MC55: IP 30)

Note: Read carefully the installation instruction of the actuator. Intended for indoor installation applications. For outdoor installation applications please contact TA Hydraulics. In cooling systems, the pipe and valve must be insulated.

DN 32-50

DN 65-150

Actuators

A wide range of high performance proportional actuators are available from TA Hydraulics (e.g. 24V, 230V, fail safe) to provide accurate modulating or 3-point control, when used together with combined control and balancing valves. See "Selection tables".

For more details on actuators, see related technical leaflet "TA-MC Actuators" or contact TA Hydraulics.

Selection tables

Valves and actuators are supplied together ensuring optimum control and simplified selection.

The codes in the selection tables are for different sets of valve size (DN) and type of actuator. All fail safe and non-fail safe sets are able to close off (or fail safe open) against 0–max. ΔpV (350-400 kPa).

For more details on actuators, see related technical leaflet “TA-MC Actuators” or contact TA Hydronics.

Article number: 22106-xxxxxx

To get the complete article number, simply add the code stated below according to your required set.

Example: 22106-031032

Product codes in *italics* are with additional actuator functionalities.

Max. $\Delta pV = 350 \text{ kPa} = 3.5 \text{ bar}$

Kv_{max} =

EN - m³/h at a pressure drop of 1 bar at each setting and fully open valve plug.

DE - m³/h bei einem Druckverlust von 1 bar bei der jeweiligen Einstellung und voll geöffnetem Regelkegel.

FR - m³/h pour une pression différentielle de 1 bar, pour chaque réglage et vanne complètement ouverte.

NL - m³/h bij een drukverschil van 1 bar, elke instelstand en volledig geopende afsluiter.

ES - m³/h con una pérdida de carga de 1 bar, para cada ajuste, estando el obturador en la posición totalmente abierta.

PT - m³/h a uma queda de pressão de 1 bar para cada ajuste e válvula totalmente aberta.

IT - m³/h ad un calo di pressione di 1 bar ciascuna impostazione e con apertura totale della valvola.

RU - м³/ч при перепаде давления в 1 бар для каждой настройки и полностью поднятом штоке клапана.

HU - m³/h, 1 bar nyomáskülönbség mellett minden előbeállítási értéknél és teljesen nyitott szeleppállásnál.

PL - m³/h przy spadku ciśnienia równym 1 bar dla każdej nastawy przy w pełni otwartym grzybku zaworu.

CS - průtok v m³/h při tlakové ztrátě zcela otevřeného ventilu 1 bar.

SK - m³/h pri tlakovej strate 1 bar, danom nastavení a plne otvorenom ventilu.

SL - m³/h pri padcu tlaka za 1 bar pri vsaki nastavitvi in popolnoma odprtem vretenu.

RO - m³/h pentru o cădere de presiune de 1 bar pentru fiecare poziție de reglare și vana complet deschisă.

BG - m³/h при пад на налягане от 1 бар за всяка настройка и при напълно отворен вентил.

HR - m³/h kod pada tlaka od 1 bar, kod svake prednamještene pozicije i potpuno otvorenog ventila.

BiH - m³/h kod pada tlaka/pritiska od 1 bar, kod svake prednamještene pozicije i potpuno otvorenog ventila.

SR - m³/h pri padu pritiska od 1 bar za svaku poziciju predpodešavanja i potpuno otvorenom ventilu.

ET - m³/h rõhu langemisel 1 baari võrra igal sätel ja täielikult avatud ventiilikaanega.

LV - m³/h pie spiediena zudumiem 1 bar, katram priekšiestatījumam un pilnībā atvērtā vārsta.

LT - m³/h esant slėgio skirtumui 1 bar pilnai atidarytam vožtuvui prie kiekvieno nustatymo.

TR - Vananın tam açık pozisyonunda ve her önarar değeri için, 1 bar basınç düşümü durumundaki debi, m³/h.

ZH - m³/h在每个设定值1 bar压力下, 且阀芯全开时.

SV - m³/h vid ett tryckfall av 1 bar vid respektive inställning och fullt öppen ventilkägla.

NO - m³/h ved et trykfall på 1 bar ved angitt innstilling og helt åpen ventilkjegle.

FI - Virtaus m³/h täysin auki olevan venttiilikaran ja kulloisenkin esisäätöarvon muodostaman vastuksen läpi.

DA - m³/h ved tryktab på 1 bar ved respektiv indstilling og fuldt åben reguleringskegle.

- EN Following operations can be made with or without the actuator mounted. Ensure that the actuator is disengaged from the valve spindle during the operations.
- DE Folgende Tätigkeiten können mit oder ohne montiertem Stellantrieb durchgeführt werden. Stellen Sie sicher, dass der Stellantrieb während der Tätigkeiten von der Ventilschindel abgekoppelt ist.
- FR Les opérations suivantes peuvent être réalisées sans démonter le moteur. S'assurer que le moteur est désaccouplé de la vanne durant les opérations.
- NL De volgende handelingen kunnen worden uitgevoerd met of zonder gemonteerde motor. Verzekert u ervan dat de motor is losgekoppeld van de spindel van de afsluiter tijdens de volgende handelingen.
- ES Las siguientes operaciones pueden realizarse con el actuador montado o desmontado. Asegúrese de que el actuador está desacoplado del vástago, durante su realización.
- PT As seguintes operações podem ser feitas com ou sem o atuador montado. Certifique que o atuador está desacoplado do eixo da válvula durante as operações.
- IT Le seguenti operazioni possono essere eseguite con o senza l'attuatore montato. Assicurarsi che l'attuatore sia disinserito dal pistone della valvola durante il funzionamento.
- RU Операции могут осуществляться как с установленным приводом, так и без него. Убедитесь, что привод отсоединен от штока клапана на время проведения операции.
- HU A következő műveletek elvégezhetőek a szelepmozgató fel- és leszerelt állapotában is. Ellenőrizze, hogy a szelepmozgató le legyen választva a szeleposzóról a következő műveletek közben.
- PL Powyższe czynności mogą być wykonane z lub bez zamontowanego siłownika. Upewnij się, że siłownik jest zdjęty z trzpienia zaworu podczas wykonywania następujących operacji.
- CS Následující činnosti lze provádět s již nainstalovaným pohonem nebo bez něj. Pohon, ale musí být odpojen od dráku ventilu.
- SK Nasledujúce činnosti možno vykonávať s už nainštalovaným pohonom alebo bez neho. Pohon, ale musí byť odpojený od drieku ventilu.
- SL Sledeče funkcije so možne z nameščenim pogonom ali brez. Prepričajte se, da je pogon ločen od vretena ventila med temi operacijami.
- RO Următoarele operațiuni pot fi realizate cu/fără servomotorul montat. Asigurați-vă că servomotorul este deconectat de pe vană și de pe axul vanei în timpul acestor operațiuni.
- BG Операциите могат да се извършват с или без инсталирана задвижка. Убедете се, че задвижката е разединена от шпиндела на вентила.
- HR Sljedeće operacije mogu biti napravljene sa ili bez montiranog pogona. Tijekom operacije, osigurati da je pogon ventila odvojen od vretena.
- BiH Sljedeće operacije mogu biti napravljene sa ili bez montiranog pogona. Tijekom operacije, osigurati da je pogon ventila odvojen od vretena.
- SR Sledeće operacije je moguće izvršiti sa ili bez pogona montiranog na ventilu. Uverite se da je pogon odvojen od vretena ventila za vreme operacija.
- ET Nende toimingute teostamiseks peab olema eelnevalt lahti ühendatud mootor ventiili spindlist.
- LV Sekojošo darbību var veikt ar vai bez izpildmehānisma montāžas. Nodrošiniet, ka aktuators ir atvienots no vārsta vārpstas šīs darbības laikā.
- LT Šiuos veiksmus galima atlikti tiek esant sumontuotoms pavaroms, tiek ir be jų. Patikrinkite, kad eksploatuojant pvara būtų atjungta nuo vožtuvo ašies.
- TR Aşağıda tanımlanan uygulamalar aktüatör vanaya montajlı veya montajsız gerçekleştirilebilir. Bu uygulamalar sırasında aktüatörün vana miline bağlı olmadiğın emin olunuz.
- ZH 在有或没有安装执行器的情况下都可进行以下操作。但是在操作时，必须将执行器脱离阀轴。
- SV Följande funktioner kan göras med eller utan monterat ställdon. Säkerställ att ställdonet är borkopplat från ventilspindeln innan injustering, avstängning, mätning eller spolning.
- NO Følgende operasjoner kan gjøres med eller uten aktuator monteret. Sørg for at aktuatoren er koblet fra ventilspindelen under operasjonene.
- FI Seuraavat toimenpiteet voidaan tehdä ilman toimilaitetta tai kun se on kiinnitetty. Varmista että toimilaitte on irrotettu venttiilin karasta seuraavien toimenpiteiden aikana.
- DA Følgende operationer kan foretages med eller uden aktuator monteret. Spindelen skal dog altid være frigjort under disse operationer.

We reserve the right to introduce technical alterations without previous notice.

BiH - m³/h kod pada tlaka/pritiska od 1 bar, kod svake prednamještene pozicije i potpuno otvorenog ventila.

SR - m³/h pri padu pritiska od 1 bar za svaku poziciju predpodešavanja i potpuno otvorenom ventilu.

ET - m³/h rõhu langemisel 1 baari võrra igal sättel ja täielikult avatud ventiilikaanega.

LV - m³/h pie spiediena zudumiem 1 bar, katram priekšiestatījumam un pilnībā atvērta vārsta.

LT - m³/h esant slėgio skirtumui 1 bar pilnai atidarytam vožtuvui prie kiekvieno nustatymo.

TR - Vananın tam açık pozisyonunda ve her önayar değeri için, 1 bar basınç düşümü durumundaki debi, m³/h.

ZH - m³/h在每个设定值1 bar压力下, 且阀芯全开时.

SV - m³/h vid ett tryckfall av 1 bar vid respektive inställning och fullt öppna ventilkägla.

NO - m³/h ved et trykkfall på 1 bar ved angitt innstilling og helt åpen ventilkjegle.

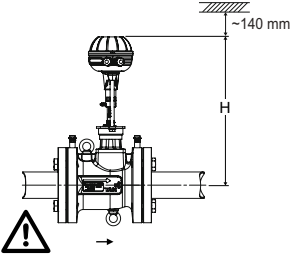

FI - Virtaus m³/h täysin auki olevan ventiilikaran ja kulloisenkin esisäätoarvon muodostaman vastuksen läpi.

DA - m³/h ved tryktab på 1 bar ved respektiv indstilling og fuldt åben reguleringskegle.

Diagram showing a valve assembly with a height dimension H and a warning symbol. The height H is indicated as approximately 140 mm. The table provides the height H in millimeters for different valve models and DN values.

- EN Following operations can be made with or without the actuator mounted. Ensure that the actuator is disengaged from the valve spindle during the operations.
- DE Folgende Tätigkeiten können mit oder ohne montiertem Stellantrieb durchgeführt werden. Stellen Sie sicher, dass der Stellantrieb während der Tätigkeiten von der Ventilschindel abgekoppelt ist.
- FR Les opérations suivantes peuvent être réalisées sans démonter le moteur. S'assurer que le moteur est désaccouplé de la vanne durant les opérations.
- NL De volgende handelingen kunnen worden uitgevoerd met of zonder gemonteerde motor. Verzeker u ervan dat de motor is losgekoppeld van de spindel van de afsluiter tijdens de volgende handelingen.
- ES Las siguientes operaciones pueden realizarse con el actuador montado o desmontado. Asegúrese de que el actuador está desacoplado del vástago, durante su realización.
- PT As seguintes operações podem ser feitas com ou sem o atuador montado. Certifique que o atuador está desacoplado do eixo da válvula durante as operações.
- IT Le seguenti operazioni possono essere eseguite con o senza l'attuatore montato. Assicurarsi che l'attuatore sia disinserito dal pistone della valvola durante il funzionamento.
- RU Операции могут осуществляться как с установленным приводом, так и без него. Убедитесь, что привод отсоединен от штока клапана на время проведения операции.
- HU A következő műveletek elvégezhetőek a szelepmozgató fel- és leszerelt állapotában is. Ellenőrizze, hogy a szelepmozgató le legyen választva a szeleposzóról a következő műveletek közben.
- PL Powyższe czynności mogą być wykonane z lub bez zamontowanego siłownika. Upewnij się, że siłownik jest zdjęty z trzpienia zaworu podczas wykonywania następujących operacji.
- CS Následující činnosti lze provádět s již nainstalovaným pohonem nebo bez něj. Pohon, ale musí být odpojen od dráku ventilu.
- SK Nasledujúce činnosti možno vykonávať s už nainštalovaným pohonom alebo bez neho. Pohon, ale musí byť odpojený od drieku ventilu.
- SL Sledeče funkcije so možne z nameščenim pogonom ali brez. Prepričajte se, da je pogon ločen od vretena ventila med temi operacijami.
- RO Următoarele operațiuni pot fi realizate cu/fără servomotorul montat. Asigurați-vă că servomotorul este deconectat de pe vană și de pe axul vanei în timpul acestor operațiuni.
- BG Операциите могат да се извършват с или без инсталирана задвижка. Убедете се, че задвижката е разединена от шпиндела на вентила.
- HR Sljedeće operacije mogu biti napravljene sa ili bez montiranog pogona. Tijekom operacije, osigurati da je pogon ventila odvojen od vretena.
- BiH Sljedeće operacije mogu biti napravljene sa ili bez montiranog pogona. Tijekom operacije, osigurati da je pogon ventila odvojen od vretena.
- SR Sledeće operacije je moguće izvršiti sa ili bez pogona montiranog na ventilu. Uverite se da je pogon odvojen od vretena ventila za vreme operacija.
- ET Nende toimingute teostamiseks peab olema eelnevalt lahti ühendatud mootor ventiili spindlist.
- LV Sekojošo darbību var veikt ar vai bez izpildmehānisma montāžas. Nodrošiniet, ka aktuators ir atvienots no vārsta vārpstas šīs darbības laikā.
- LT Šiuos veiksmus galima atlikti tiek esant sumontuotoms pavaroms, tiek ir be jų. Patikrinkite, kad eksploatuojant pavara būtų atjungta nuo vožtuvo ašies.
- TR Aşağıda tanımlanan uygulamalar aktüatör vanaya montajlı veya montajsız iken gerçekleştirilebilir. Bu uygulamalar sırasında aktüatörün vana miline bağlı olmadiğında emin olunuz.
- ZH 在有或没有安装执行器的情况下都可进行以下操作。但是在操作时，必须将执行器脱离阀轴。
- SV Följande funktioner kan göras med eller utan monterat ställdon. Säkerställ att ställdonet är borkopplat från ventilspindeln innan injustering, avstängning, mätning eller spolning.
- NO Følgende operasjoner kan gjøres med eller uten aktuator montert. Sørg for at aktuatoren er koblet fra ventilspindelen under operasjonene.
- FI Seuraavat toimenpiteet voidaan tehdä ilman toimilaitetta tai kun se on kiinnitetty. Varmista että toimilaitte on irrotettu ventiliin karasta seuraavien toimenpiteiden aikana.
- DA Følgende operationer kan foretages med eller uden aktuator monteret. Spindelen skal dog altid være frigjort under disse operationer.

Max. ΔpV = 400 kPa = 4.0 bar

Kv_{max} =

EN - m³/h at a pressure drop of 1 bar at each setting and fully open valve plug.

DE - m³/h bei einem Druckverlust von 1 bar bei der jeweiligen Einstellung und voll geöffnetem Regelkegel.

FR - m³/h pour une pression différentielle de 1 bar, pour chaque réglage et vanne complètement ouverte.

NL - m³/h bij een drukverschil van 1 bar, elke instelstand en volledig geopende afsluiter.

ES - m³/h con una pérdida de carga de 1 bar, para cada ajuste, estando el obturador en la posición totalmente abierta.

PT - m³/h a uma queda de pressão de 1 bar para cada ajuste e válvula totalmente aberta.

IT - m³/h ad un calo di pressione di 1 bar ciascuna impostazione e con apertura totale della valvola.

RU - m³/ч при перепаде давления в 1 бар для каждой настройки и полностью поднятом штоке клапана.

HU - m³/h, 1 bar nyomáskülönbbség mellett minden előbeállítás értéken és teljesen nyitott szeleppállásnál.

PL - m³/h przy spadku ciśnienia równym 1 bar dla każdej nastawy przy w pełni otwartym grzybku zaworu.

CS - průtok v m³/h při tlakové ztrátě zcela otevřeného ventilu 1 bar.

SK - m³/h pri tlakovej strate 1 bar, danom nastavení a plne otvorenom ventilu.

SL - m³/h pri padcu tlaka za 1 bar pri vsaki nastavitvi in popolnoma odprtem vretenu.

RO - m³/h pentru o cădere de presiune de 1 bar pentru fiecare poziție de reglare și vana complet deschisă.

BG - m³/h при пад на налягане от 1 бар за всяка настройка и при напълно отворен вентил.

HR - m³/h kod pada tlaka od 1 bar, kod svake prednamješene pozicije i potpuno otvorenog ventila.

BiH - m³/h kod pada tlaka/pritiska od 1 bar, kod svake prednamješene pozicije i potpuno otvorenog ventila.

SR - m³/h pri padu pritiska od 1 bar za svaku poziciju predpodešavanja i potpuno otvorenom ventilu.

ET - m³/h rõhu langemisel 1 baari võrra igal sättel ja täielikult avatud ventiilikaanega.

LV - m³/h pie spiediena zudumiem 1 bar, katram priekšiestatījumam un pilnībā atvērta vārsta.

LT - m³/h esant slėgio skirtumui 1 bar pilnai atidarytam vožtuvui prie kiekvieno nustatymo.

TR - Vananın tam açık pozisyonunda ve her önayar değeri için, 1 bar basınç düşümü durumundaki debi, m³/h.

ZH - m³/h在每个设定值1 bar压力下, 且阀芯全开时.

SV - m³/h vid ett tryckfall av 1 bar vid respektive inställning och fullt öppna ventilkägla.

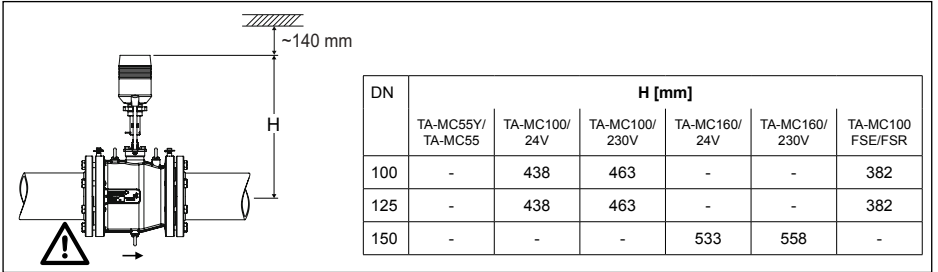

NO - m³/h ved et trykkfall på 1 bar ved angitt innstilling og helt åpen ventilkjegle.

FI - Virtaus m³/h täysin auki olevan ventiilikaran ja kulloisenkin esisäätoarvon muodostaman vastuksen läpi.

DA - m³/h ved tryktab på 1 bar ved respektiv indstilling og fuldt åben reguleringskegle.
