

# TA-FUSION-C

## Combined control & balancing valves

With independent EQM characteristics

Engineering  
**GREAT** Solutions

# TA-FUSION-C

These innovative balancing and control valves for heating and cooling systems combine the key hydronic functions of balancing and control in one valve. Adjustable Kvs and inherent independent EQM characteristics allow correct valve sizing and optimum system controllability. The measuring points enable accurate measurement of flow, differential pressure, temperature and available differential pressure.

## Key features

- > **Adjustable Kvs**  
Allows correct Kvs setting corresponding to system requirements.
- > **Independent, inherent EQM characteristic**  
Proper EQM valve characteristic for all settings.

- > **Self-sealing measuring points**  
Simple and accurate measurement for balancing, trouble shooting and power measurement.
- > **Actuators**  
Valves and actuators supplied together ensuring optimum control performance and simplified selection.

## Technical description – Valve

### Application:

Heating and cooling systems.

### Functions:

Control (EQM)  
Balancing  
Pre-setting (Kvs)  
Measuring ( $\Delta pV$ ,  $\Delta H$ , T, q)  
Shut-off (for isolation during system maintenance)

### Dimension:

DN 32-150

### Pressure class:

DN 32-50: PN 16  
DN 65-150: PN 16 and PN 25

### Max. differential pressure ( $\Delta pV_{max}$ ):

400 kPa = 4 bar

$\Delta pV_{max}$  = The maximum allowed pressure drop over the valve, to fulfill all stated performances.

### Recommended setting range ( $Kv_{max}$ ):

DN 32: 2,68 - 12,9  
DN 40: 3,03 - 18,5  
DN 50: 8,03 - 33,0  
DN 65-2: 24,3 - 64,3  
DN 80-2: 38,1 - 100  
DN 100: 57,4 - 160  
DN 125: 97,4 - 270  
DN 150: 146 - 400  
 $Kv_{max}$  = m<sup>3</sup>/h at a pressure drop of 1 bar at each setting and fully open valve plug.

### Lift:

20 mm

### Rangeability:

>100 (for all recommended settings)

### Leakage rate:

Tight sealing

### Characteristics:

Independent EQM.

### Temperature:

Max. working temperature: 120°C  
Min. working temperature: -20°C

### Media:

Water or neutral fluids, water-glycol mixtures.  
(For other media contact IMI Hydronic Engineering.)

### Material:

DN 32-50:  
Valve body: AMETAL®  
Valve plug: AMETAL®  
Seat seal: EPDM/Stainless steel  
Spindle seal: EPDM O-ring  
O-rings: EPDM  
Valve insert: AMETAL®/PPS/PTFE  
Springs: Stainless steel  
Spindle: Stainless steel  
DN 65-150:  
Valve body: Ductile iron EN-GJS-400  
Valve plug: Stainless steel  
Seat seal: EPDM/Stainless steel  
O-rings: EPDM  
Plug mechanism: Stainless steel and brass  
Screws and nuts: Stainless steel

AMETAL® is the dezincification resistant alloy of IMI Hydronic Engineering.

**Surface treatment:**

DN 32-50: Non treated

DN 65-150: Electrophoretic painting.

**Marking:**

DN 32-50: TAH, IMI, DN, PN, DR, serial No and flow direction arrow.

 DN 65-150: TAH, IMI, DN, PN, Kvs,  $T_{min/max}$ , serial number, valve body material and flow direction arrow, label.

CE-marking:

DN 65-125: CE

DN 150: CE 0062 \*

\*) Notified body.

**Connection:**

DN 32-50:

Female thread according to ISO 228. Thread length according to ISO 7-1.

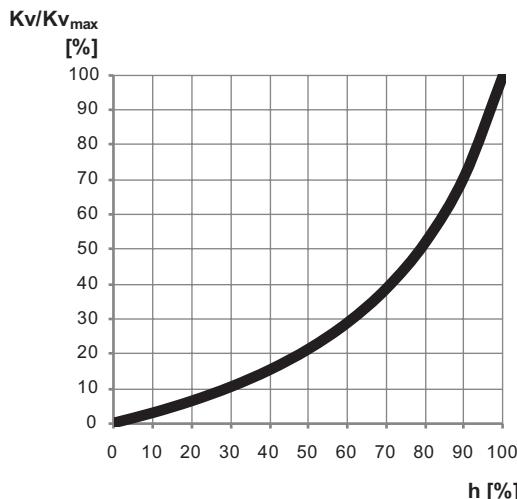

Male thread according to ISO 228.

DN 65-150:

Flanges according to EN-1092-2, type 21. Face to face length according to EN 558 series 3.

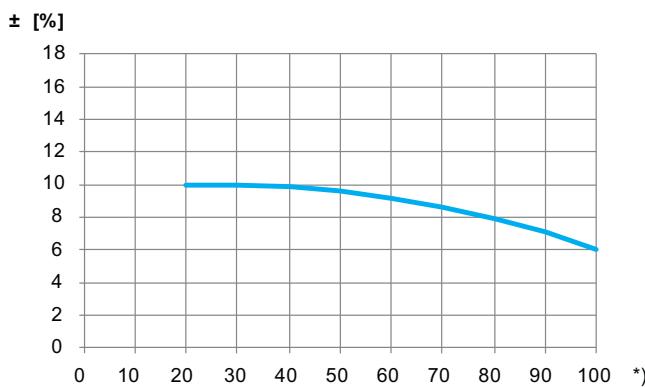

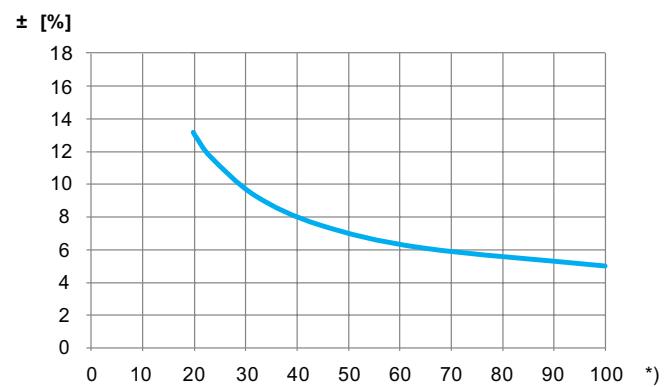

## Valve characteristics

Nominal valve characteristic for all recommended settings.

## Measuring accuracy

### Maximum flow deviation at different settings

**DN 32-50**

**DN 65-150**

## Correction factors

The flow calculations are valid for water (+20°C). For other liquids with approximately the same viscosity as water ( $\leq 20 \text{ cSt} = 3^\circ\text{E}=100\text{S.U.}$ ), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves. This causes

a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software HySelect or directly in our balancing instruments.

## Noise

In order to avoid noise in the installation the flows must be correctly balanced and the water de-aerated. Very high differential pressures can cause noise in the installations, and in that case, differential pressure controllers should be used.

The maximum recommended pressure drop in order to avoid excessive noise is 200 kPa.

## Actuators

A wide range of high performance proportional actuators are available from IMI Hydronic Engineering (e.g. 24V, 100-240V, 230V, fail safe) to provide accurate modulating or 3-point control, when used together with combined balancing and control valves. See "Selection tables".

For more details on actuators, see separate technical leaflets or contact IMI Hydronic Engineering.

## Sizing

When  $\Delta p$  and flow are known, use the formula to calculate  $Kv_{max}$ :

$$Kv = 0,01 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/h, } \Delta p \text{ kPa}$$

$$Kv = 36 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/s, } \Delta p \text{ kPa}$$

### Example

Flow is 10 m<sup>3</sup>/h,  $\Delta p$  is 35 kPa and control signal (input signal) 0-10 VDC.

1. Go to sizing diagram. (When calculating the  $Kv_{max}$  by the formula go directly to step 4).
2. Draw a straight line between 10 m<sup>3</sup>/h and 35 kPa.
3. Read the needed  $Kv_{max}$  value where the line crosses the  $Kv$ -axis. In this case  $Kv_{max}=16,9$ .
4. Draw a horizontal line from  $Kv_{max} 16,9$ , which will cross the setting bars for all valves which fit the application. In this case DN 40 setting 9,5, DN 50 setting 5,0.
5. Choose the smallest option (with some safety margin). In this case DN 50 is preferable.
6. Go to the selection tables to select the correct valve and actuator combination. In this case article number 322205-50911 (24 V).

### Note

If the required flow falls outside the scale of the diagram, the reading can be made as follows: Use the design  $\Delta p$  and draw the line to a flow that is 0,1 or 10 times the design flow, getting  $Kv_{max}$  in the same relation (either 0,1 or 10 times needed).

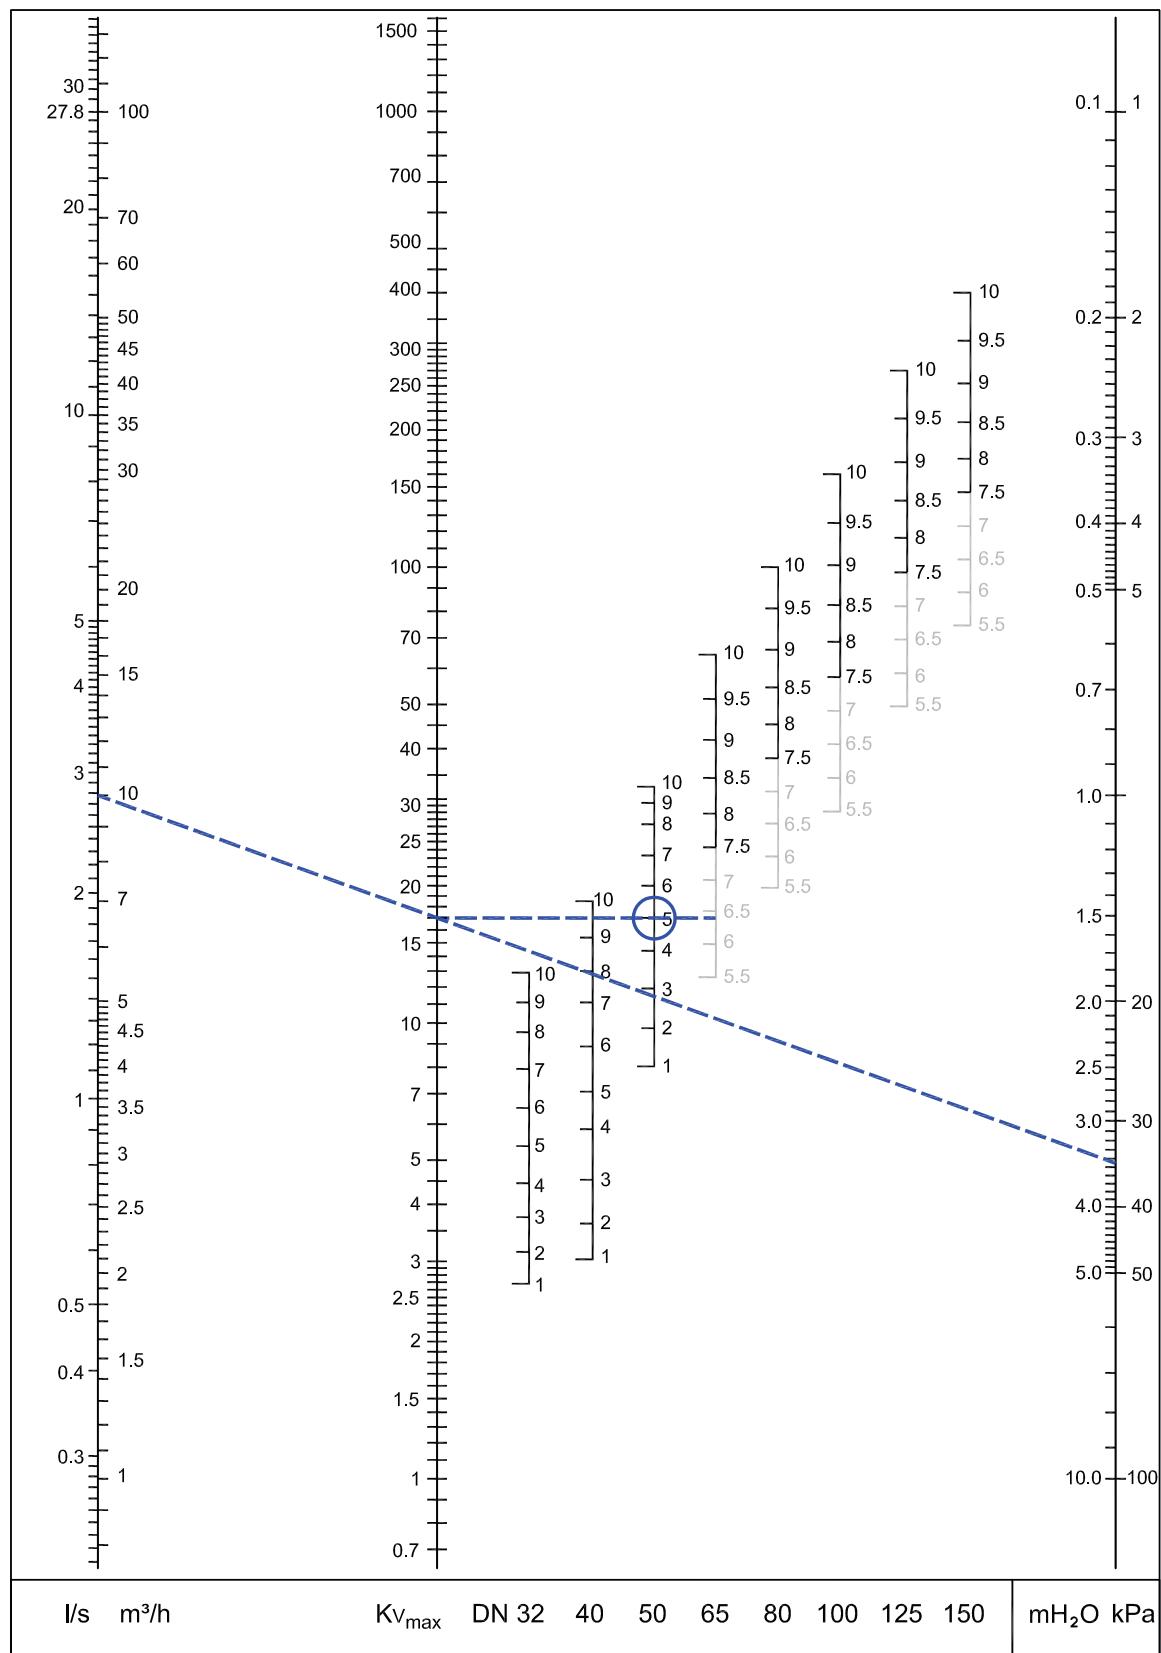

Following the previous example

35 kPa and 10 m<sup>3</sup>/h gives  $Kv_{max}=16,9$

35 kPa and 1 m<sup>3</sup>/h gives  $Kv_{max}=1,69$

35 kPa and 100 m<sup>3</sup>/h gives  $Kv_{max}=169$

Sizing diagram

DN 65-150: Recommended setting range 7.5–10 ( $\approx 40\text{--}100\%$  of Kv<sub>s</sub>).

## Selection tables

### Maximum recommended pressure drop ( $\Delta pV$ ) for valve and actuator combination

The maximum recommended pressure drop over the valve and actuator combination for close off ( $\Delta pV_{close}$ ) and to fulfill all stated performances ( $\Delta pV_{max}$ ). For detailed information on maximum closing off pressure, see "Closing force".

$\Delta pV_{close}$  = The maximum pressure drop that the valve can close against from an opened position, with a specified force (actuator) without exceeding stated leakage rate.

$\Delta pV_{max}$  = The maximum allowed pressure drop over the valve, to fulfill all stated performances.

DN	TA-Slider 750 [kPa]	TA-Slider 1250 [kPa]	TA-MC100 FSE/FSR [kPa]
<b>32</b>	400	–	400
<b>40</b>	400	–	400
<b>50</b>	400	–	400
<b>65</b>	400	–	400
<b>80</b>	400	–	400
<b>100</b>	400	–	400
<b>125</b>	400	–	400
<b>150</b>	200	400	400

The codes in the selection tables are for different sets of valve size (DN) and type of actuator. Valves and actuators supplied together ensures optimum control and simplified selection. For other combinations order valve and actuator separately, see "Articles – Valves" and "Articles – Actuators".

For more details on actuators, see separate technical leaflets or contact IMI Hydronic Engineering.

DN 65-150: Recommended setting range 7.5–10 (≈40–100% of Kvs).

Kv<sub>max</sub> = m<sup>3</sup>/h at a pressure drop of 1 bar at each setting and fully open valve plug.

## Closing force

Necessary force ( $F$ ) to close the valve versus the differential pressure ( $\Delta pV_{close}$ ), without exceeding stated leakage rate.

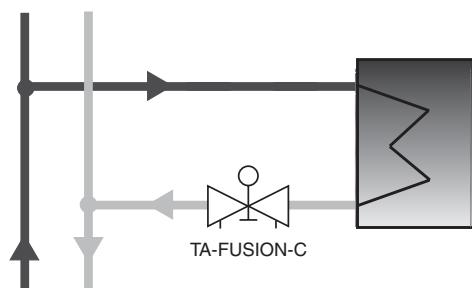

$\Delta pV_{close}$  = The maximum pressure drop that the valve can close against from an opened position, with a specified force (actuator) without exceeding stated leakage rate.

$\Delta pV_{max}$  = The maximum allowed pressure drop over the valve, to fulfill all stated performances.

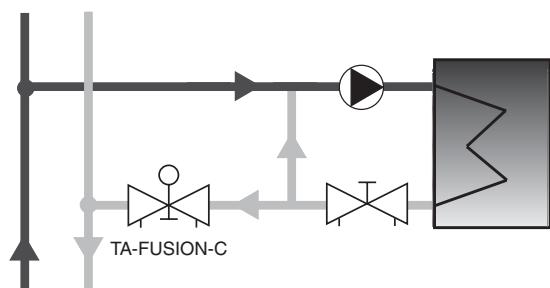

## Installation

### Application examples

2-way direct circuit

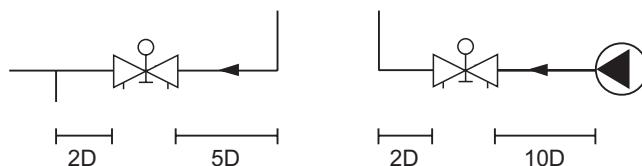

Injection circuit

### Normal pipe fittings

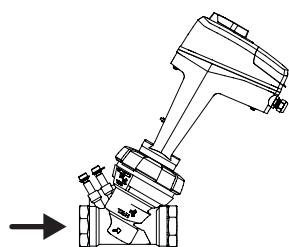

Avoid mounting taps and pumps immediately before or after the valve.

Installation recommendation for accurate measurement due to distortion of fully developed turbulent flow profile.

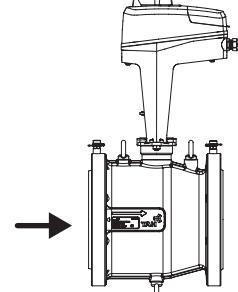

### Flow direction

DN 32-50

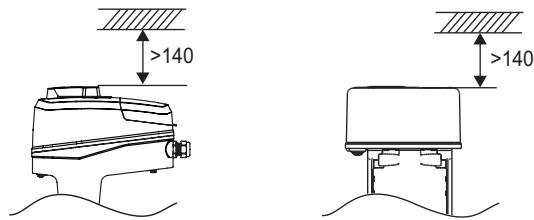

DN 65-150

### Installation of actuator

Approx. 140 mm of free space is required above the actuator.

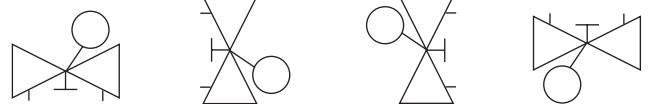

### Ingress protection

IP54

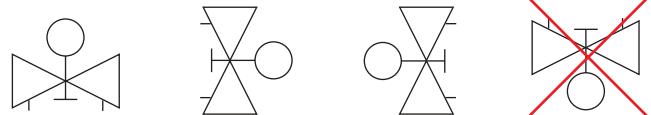

**Note:** Read carefully the installation instruction of the actuator.

### TA-Slider 750/TA-Slider 1250

DN 32-50

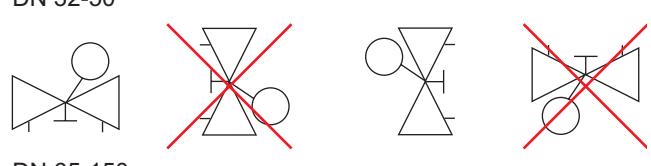

DN 65-150

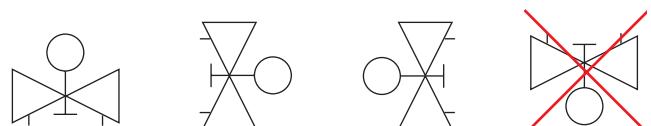

### TA-MC100 FSE/FSR

DN 32-50

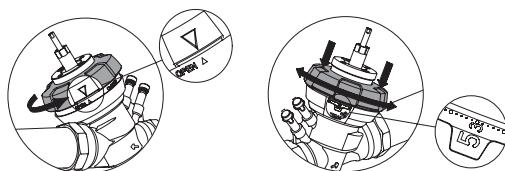

DN 65-150

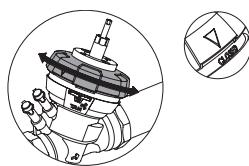

## Operating function DN 32-50

### Setting

1. Open the valve **fully** with the handwheel.
2. Press the handwheel downwards and turn to desired value, e.g. 5.3.

### Shut-off

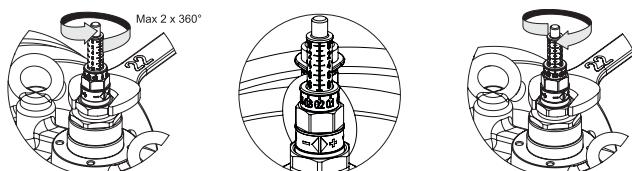

1. Turn the handwheel to "Closed".

Turn the handwheel to "Open" when re-opening the valve.

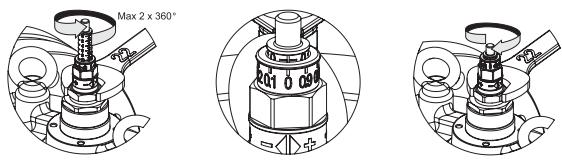

## Operating function DN 65-150

### Setting

1. Release the fixing nut.
2. Turn the setting screw to desired value on the scale, e.g. 9.2.
3. Tighten the fixing nut.

### Shut-off

1. Release the fixing nut.
2. Turn the setting screw clockwise to stop (position 0  $\pm$ 0.5).  
The presetting is visible on the setting scale.
3. Tighten the fixing nut.

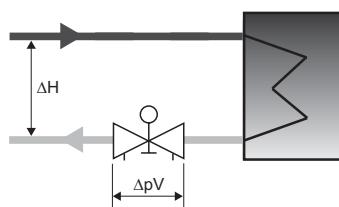

Open to **previous setting** when re-opening the valve.

### Measuring $\Delta pV$ and q

Connect IMI Hydronic Engineering balancing instrument to the measuring points. Input the valve type, size and setting and the actual flow is displayed.

### Measuring $\Delta H$

Connect IMI Hydronic Engineering balancing instrument to the measuring points. Close the valve according to "Shut-off" and measure. **Important!** The valve must be re-opened **fully** after the measurement is completed.

### NOTE!

Ensure that the actuator is disengaged from the valve spindle during all operating functions described above.

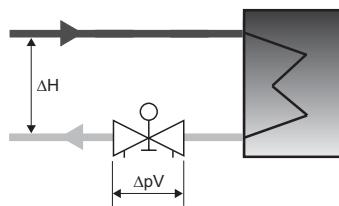

### Measuring $\Delta pV$ and q

Connect IMI Hydronic Engineering balancing instrument to the measuring points. Input the valve type, size and setting and the actual flow is displayed.

### Measuring $\Delta H$

Connect IMI Hydronic Engineering balancing instrument to the measuring points. Close the valve according to "Shut-off" and measure.

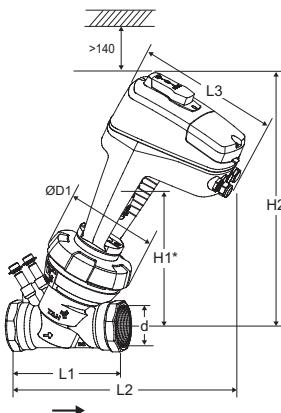

**Important!** The valve must be re-opened to **previous setting** after the measurement is completed.

### NOTE!

Ensure that the actuator is disengaged from the valve spindle during all operating functions described above.

TA-MC100FSR	230 VAC	3831112512153	61-100-202

**Adapter for actuator to be ordered separately, when valve (DN 65-150) and actuator are ordered separately.**

### TA-Slider 750 Plus / TA-Slider 1250 Plus

The Plus version has the following additional functions;

- Binay input, relays, output signal in mA
- BUS communication for ModBus, BACnet or KNX (with or without binay input, relays, output signal in mA)

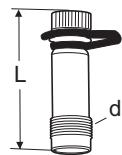

The Plus version of the TA-Slider actuators to be ordered separately. See separate technical leaflets TA-Slider 750 and TA-Slider 1250.
