

TA-6-way valve

Standard control valves

6-way valve for change-over systems

Engineering
GREAT Solutions

TA-6-way valve

The 6-way valve solution enables various control set-ups for heating and cooling in sequence on one terminal unit. Provides automatically adopted settings of max. flows for heating and cooling modes together with TA-Modulator and TA-Slider 160 Plus or TA-Slider 160 KNX R24.

Key features

- > **Easy commissioning and balancing**
Provides automatically adopted settings of max. flows for heating and cooling mode together with TA-Modulator and TA-Slider 160 Plus or TA-Slider 160 KNX R24.
- > **Precise flow control**
Provides uniquely shaped EQM characteristic for best modulating control together with TA-Modulator.
- > **Easy troubleshooting**
Provides flow and differential pressure measuring for system diagnostics and pump optimization together with TA-Modulator.
- > **Compact installation**
Saves space by using one terminal unit for heating and cooling.

Technical description – Valve

Application:

Heating and cooling systems.
(Change-over system)

Functions:

Control

Dimensions:

DN 15-20

Pressure class:

PN 16

Max. differential pressure (Δp_V):

200 kPa

Temperature:

Max. working temperature: 120°C
Min. working temperature: -10°C

Media:

Water or neutral fluids, water-glycol mixtures (0-57%).

Leakage rate:

Level A (EN 12266-1/12 - P12)

Characteristics:

Linear, best suited for on/off control.

Material:

Body:
Standard version: Brass CW617N
CuZn40Pb2
DZR version: Brass CW602N
CuZn36Pb2As
Balls: Brass CW614N CuZn39Pb3
Stems: Brass CW614N CuZn39Pb3
Seats: PTFE
O-rings: EPDM (Perox)

Surface treatment:

Standard version:
Chrome plated body, stems and balls.
DZR version:
Chrome plated stems and balls (body yellow).

Marking:

IMI TA, PN, DN.

Connection:

Male thread according to ISO 228.
- Eurocone
- Flat faced ends
Female thread according to ISO 228.

Connection to actuator:

F03 and F04 according to EN ISO 5211.

Angle of rotation:

90°

Actuators:

TA-M106, TA-MC106Y

Technical description – Actuator

Functions:

Proportional control
3-point control
Manual override

Supply voltage:

TA-M106/24: 24 VAC +6% -10%
TA-M106/230: 230 VAC +6% -10%
TA-MC106Y: 24 VAC ±10%

Frequency:

50/60 Hz ±5%.

Power consumption:

TA-M106: 3.5 VA
TA-M106Y: 3.0 VA

Input signal:

TA-M106: 3-point
TA-MC106Y: 0(2)-10 VDC, R_i 77 k Ω .
(0-10, 10-0, 2-10, 10-2)

Output signal:

TA-MC106Y: 0-10 VDC (0-10, 10-0),
max. 8 mA, min. 1,2 k Ω .

Actuating time:

TA-M106: 130 s (at 50 Hz/90°)
TA-MC106Y: 150/80 s (at 50 Hz/90°)

Adjusting torque:

8 Nm

Temperature:

Medium temperature: max. 80°C
Operating environment: 0°C - +50°C

Ingress protection:

IP 43

Protection class:

EN 60730
24 VAC: III
230 VAC: II

End position switch-off:

Fixed at 90°

Cable:

1,5 m, three wire (0,5 mm²) with wire end ferrule

Colour:

Orange RAL 2011, grey RAL 7043.

Marking:

Label: IMI TA, CE, product name and technical specification.

Connection to valve:

F04 according to EN ISO 5211.

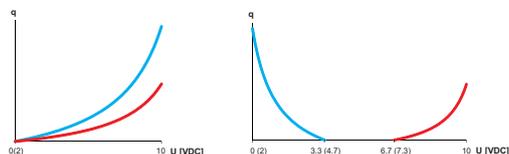

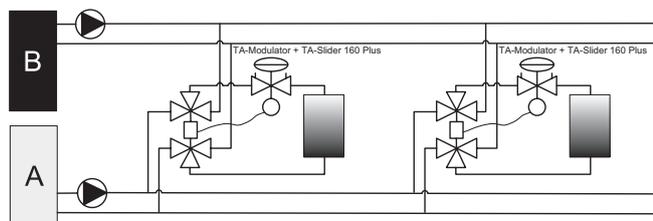

Angle of rotation:

90°

Application examples

Control via the actuator TA-Slider 160 Plus or TA-Slider 160 KNX R24 and the pressure independent control valve TA-Modulator

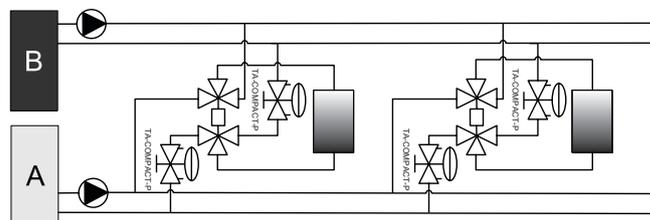

(See connection diagrams TA-Slider 160 Plus + TA-M106 and TA-Slider 160 KNX R24 + TA-M106)

- EQM valve characteristic for best modulating control.
- High valve authority thanks to pressure independent control valve.
- Automatically adopted flow settings for heating and cooling mode.
- The 6-way valve for change-over between heating and cooling.

Control via the actuator TA-MC106Y and the TA-6-way valve

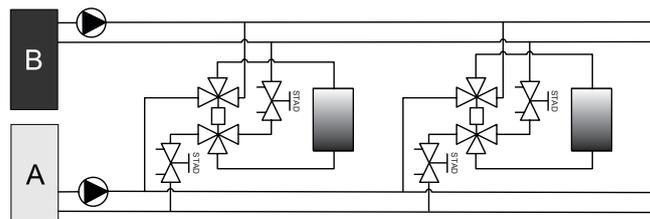

(See connection diagram TA-MC106Y)

- Valve characteristic best suited for on/off-control.
- Pressure independent flow settings for heating and cooling mode with the valve TA-COMPACT-P.

Control via the actuator TA-MC106Y and the TA-6-way valve

(See connection diagram TA-MC106Y)

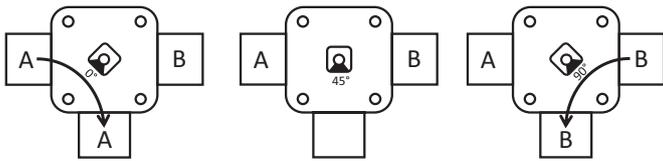

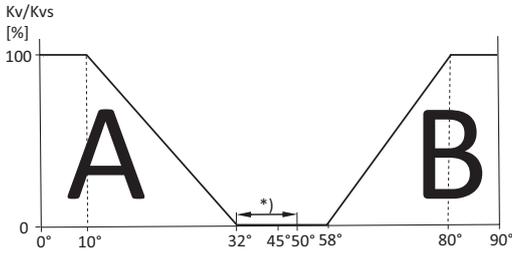

- Valve characteristic best suited for on/off-control.
- Flow balancing of heating and cooling mode with the valve STAD.

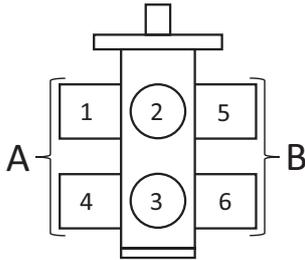

Note: Differential pressure control with STAP/STAD is recommended in branches for pressure independent modules.

Installation

Flow distribution

*) Pressure balance function: Pressure connection between port 1 and 2, at 32° to 50°, for proper pressurisation of the terminal at zero flow. **NOTE!** Any control valve should be connected to port 3.

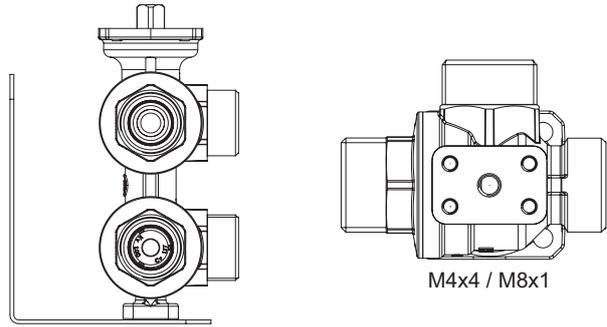

Pressurisation

NOTE! When designing the pressurisation system: please consider that change-over systems have hydraulic interaction between the cooling and the heating system via the terminals, which cause a fluid mass transfer from the cooling to the heating system. For further information please contact IMI Hydronic Engineering.

Example valve + bracket

Connection diagram

TA-M106

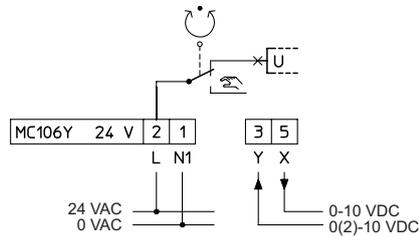

3-point

*) Depending on TA-M106 version.

TA-MC106Y

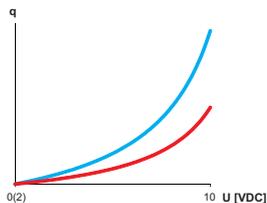

Proportional (0(2)-10 VDC)

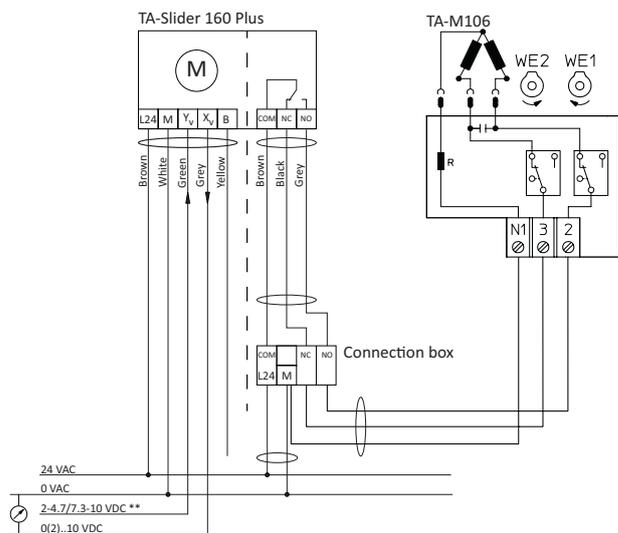

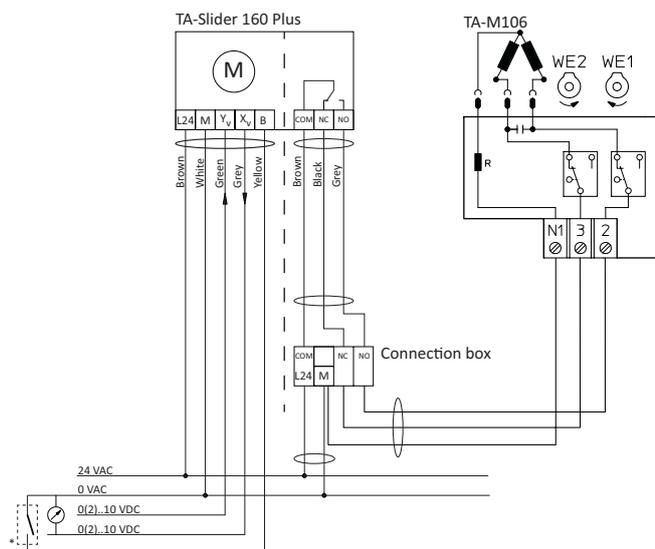

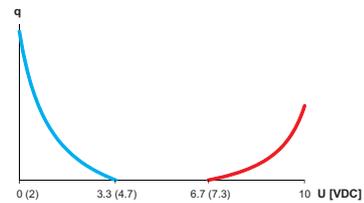

TA-Slider 160 Plus + TA-M106

(See Application example 1)

Modulating control

Dual range modulating control

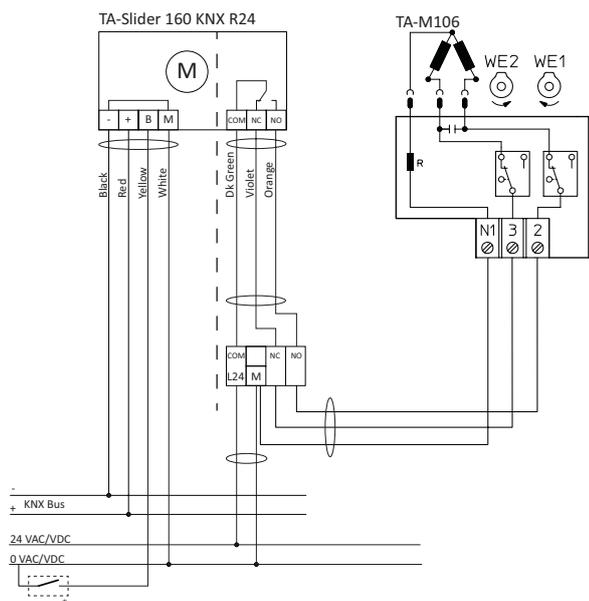

***) Dual range signal 0-3.3/6.7-10 VDC or 2-4.7/7.3-10 VDC.

*) Binary input for toggling between heating and cooling mode.

TA-Slider 160 KNX R24 + TA-M106

(See Application example 1)

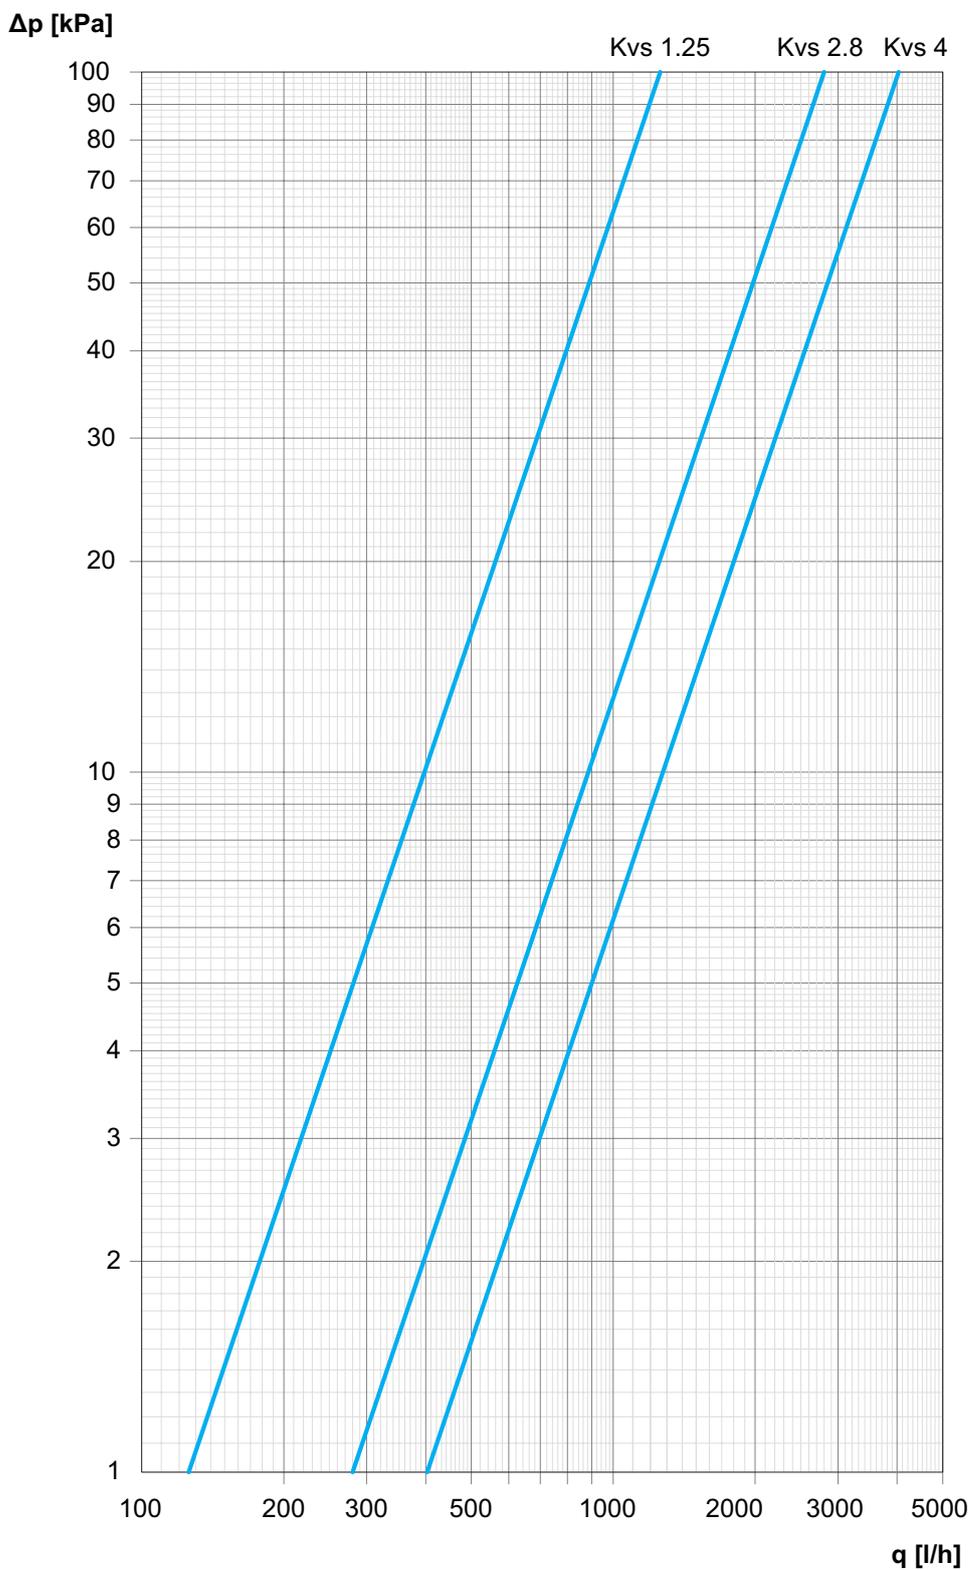

Control by KNX bus

Terminal	Description
L24	Power supply 24 VAC
M	Neutral for power supply 24 VAC and signals
Y_v	Input signal for proportional control 0(2)-10 VDC, 47 k Ω
X_v	Output signal 0(2)-10 VDC, max. 8 mA or min. load resistance 1.25 k Ω
B	Connection for potential free contact (e.g. open window detection), max. 100 Ω , max. 10 m cable or shielded
COM	Common relay contact, max. 250 VAC, max. 5A @ 250 VAC on resistive load, max. 5A @ 30 VDC on resistive load
NC	Normally closed contact for relay
NO	Normally open contact for relay

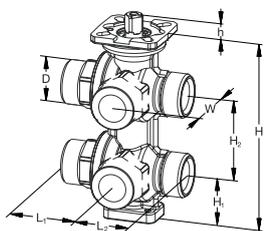

*) Binary input can be used to toggle between heating and cooling mode as an alternative to toggling by KNX bus.
