Termotec

The Termotec upgradeable manual radiator valve is used in warm water pump heating systems, gravity or low pressure steam systems.

Key features

- **Double O-ring sealing**
- **Non-rising spindle**
- **Can be retrofitted as a thermostatic valve**

Technical description

Termotec upgradeable manual radiator valves with white plastic handwheel cap, RAL 9016.

Body made of nickel plated brass.

Lengths according to DIN EN 215 Series F.

Non-rising spindle with double EPDM O-ring sealing.

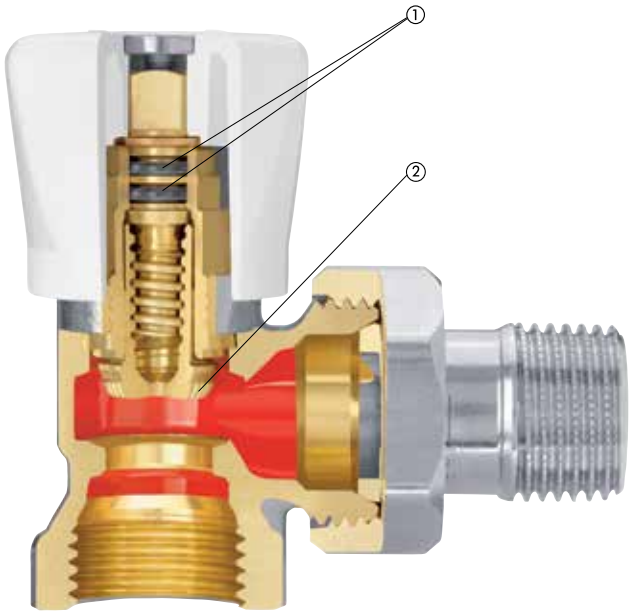
Can be retrofitted as a thermostatic valve by replacing the Termotec insert with a thermostatic insert, see accessories. With a special tool (on request) this changing is possible under pressure.

Can be connected to a threaded pipe, or with compression fittings to a copper or precision steel pipe.

For Termotec, only use the auxiliary, labelled IMI Heimeier compression fittings (label e. g. 15 THE).
Permitted operating temperature TB 120°C (248°F).
Permitted operating pressure PB 10 bar, low pressure steam 110°C (230°F)/ 0.5 bar.

Construction

Termotec



1. Double O-ring sealing
2. Regulation cone

Application

The Termotec upgradeable manual radiator valve is used in warm water pump heating systems, gravity or low pressure steam systems. With models in angle and straight form from DN 15 to DN 20, the manual radiator valve can be used for a number of different purposes.

Note

The contents of the heat transfer medium should comply with VDI guideline 2035 on damage and scale deposit formation in warm water heating systems.
For industrial and long-distance energy systems, see the applicable codes VdTÜV 1466 and AGFW FW 510. Mineral oils in the heat transfer medium or lubricants containing mineral oils of any type lead to strong swelling and in most cases cause EPDM seals to fail.
When using nitrite-free frost and corrosion resistance solutions with an ethylene glycol base, pay close attention to the details outlined in the manufacturers' documentation, particularly details concerning concentration and specific additives.

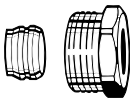
Accessories



Compression fitting
for copper or precision steel pipes.
Female thread connection Rp 3/8 – Rp 3/4.
Metal-to-metal joint. Brass nickel-plated.
Support sleeves should be used for a pipe wall thickness of 0.8 – 1 mm. Follow the specifications of the pipe manufacturer.
