

# **STAD** – NPT threads

# **Balancing valves**

DN 10-50, PN 25

# STAD - NPT threads

The STAD balancing valve delivers accurate hydronic performance in an impressive range of applications. Ideally suited for use on the secondary side in heating and cooling systems, and tap water systems.

# **Key features**

- High accuracy for all settings Ensure accurate balancing and flow reading.
- Handwheel Equipped with a digital read-out, the handwheel ensures accurate and straightforward balancing. Positive

shut-off function for easy maintenance.

- > Self-sealing measuring points For simple, accurate balancing.
- > AMETAL® Dezincification resistant alloy that guarantees a longer valve lifetime and lowers the risk of leakage.

# **Technical description**

#### Application:

Heating and cooling systems Tap water systems

#### **Functions:**

Balancing
Pre-setting
Measuring
Shut-off
Draining (depending on valve type)

#### **Dimensions:**

DN 15-50

#### Pressure class:

PN 25

#### Temperature:

Max. working temperature: 120°C

(intermittent 150°C)

Min. working temperature: -20°C

#### Madia

Water or neutral fluids, water-glycol mixtures (0-57%).

#### Material:

Valve body and bonnet: AMETAL® Sealing (body/bonnet): EPDM O-ring

Valve plug: AMETAL® Seat seal: EPDM O-ring Spindle: AMETAL® Slip washer: PTFE Spindle seal: EPDM O-ring Spring: Stainless steel

Handwheel: Polyamide and TPE

Measuring points: AMETAL®

Sealings: EPDM

Caps: Polyamide and TPE

Draining: AMETAL® Sealing: EPDM

Gaskets: Fiber-based aramid

AMETAL® is the dezincification resistant alloy of IMI Hydronic Engineering.

#### Marking:

Body: IMI, TA, PN 25/400 WWP, DN and inch size. DN 50 also CE. Handwheel: TA, STAD\* and DN.

#### Connection:

Female thread NPT according to ANSI/ASME B1.20.1-1983.

# **Measuring points**

# **Draining**

Measuring points are self-sealed. Remove the cap and insert the probe through the seal.

Valves with draining for UNS 1 1/16" x 11.5 hose connection.

# **Sizing**

When  $\Delta p$  and the design flow are known, use the formula to calculate the Kv value or use the diagram.

$$Kv = 0.01 \frac{q}{\sqrt{\Delta p}}$$
 q I/h,  $\Delta p$  kPa

$$Kv = 36 \frac{q}{\sqrt{\Delta p}} \qquad q \text{ l/s, } \Delta p \text{ kPa}$$

#### Kv values

| Turns | DN 15 | DN 20 | DN 25     | DN 32     | DN 40 | DN 50 |
|-------|-------|-------|-----------|-----------|-------|-------|
| 0.5   | 0.136 | 0.533 | 0.599     | 1.19      | 1.89  | 2.62  |
| 1     | 0.226 | 0.781 | 1.03      | 1.03 2.09 |       | 4.10  |
| 1.5   | 0.347 | 1.22  | 1.22 2.13 |           | 4.74  | 6.76  |
| 2     | 0.618 | 1.95  | 3.64      | 5.22      | 6.25  | 11.4  |
| 2.5   | 0.931 | 2.71  | 5.26      | 7.77      | 9.16  | 15.8  |
| 3     | 1.46  | 3.71  | 6.65      | 9.82      | 12.8  | 21.5  |
| 3.5   | 2.07  | 4.51  | 7.79      | 11.9      | 16.2  | 27.0  |
| 4     | 2.56  | 5.39  | 8.59      | 14.2      | 19.3  | 32.3  |

**NOTE:** In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the STAD, PN 25 version, is named STAD\*.

# **Measuring accuracy**

The zero position is calibrated and must not be changed.

# Deviation of flow at different settings

The curve (Fig. 1) is valid for valves with normal pipe fittings (Fig. 2). Try also to avoid mounting taps and pumps, immediately before the valve.

The valve can be installed with the opposite flow direction. The specified flow details are also valid for this direction although tolerances can be greater (maximum 5% more).

Fig. 1

\*) Setting, No. of turns.

Fig. 2

D = Valve DN

#### **Correction factors**

The flow calculations are valid for water ( $\pm 20^{\circ}$ C). For other liquids with approximately the same viscosity as water ( $\pm 20 \text{ cSt} = 3^{\circ}\text{E} = 100\text{S.U.}$ ), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves. This causes

a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software HySelect or directly in our balancing instruments.

# **Setting**

Setting of a valve for a particular pressure drop, e g corresponding to 2.3 turns on the graph, is carried out as follows:

- 1. Close the valve fully (Fig 1).
- 2. Open the valve 2.3 turns (Fig. 2).
- **3.** Using a 3 mm Allen key, turn the inner spindle clockwise until stop.
- 4. The valve is now set.

To check the setting: Close the valve, the indicator shows 0.0. Open it to the stop position. The indicator then shows the set value, in this case 2.3 (Fig. 2).

Diagrams showing the pressure drop for each valve size at different settings and flow rates are available to help determine the correct valve size and pre-setting (pressure drop).

Four turns corresponds to fully opened valve (Fig. 3). Opening it further will not increase the capacity.

Fig. 2
The valve is set at 2.3

Fig. 3
Fully open valve

### **Diagram example**

#### Wanted:

Presetting for DN 25 at a desired flow rate of 1,6  $\,$ m $^3$ /h and a pressure drop of 10 kPa.

#### Solution:

Draw a straight line joining 1,6 m³/h and 10 kPa. This gives Kv=5,06. Now draw a horizontal line from Kv=5,06. This intersects the bar for DN 25 which gives 2,35 turns.

#### NOTE:

If the flow rate is out of the scale in the diagram, the reading can be made as follows:

Starting with the example above, we get 10 kPa, Kv=5.06 and flow-rate 1.6 m<sup>3</sup>/h.

At 10 kPa and Kv=0.506 we get the flow-rate 0.16 m $^3$ /h, and at Kv=50.6, we get 16 m $^3$ /h. That is, for a given pressure drop, it is possible to read 10 times or 0.1 times the flow and Kv-values.

# **Diagram**

NOTE: In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the STAD, PN 25 version, is named STAD\*.
