## TA-6-way valve

### Standard control valves

6-way valve for change-over systems

## TA-6-way valve

The 6-way valve solution enables various control set-ups for heating and cooling in sequence on one terminal unit. Provides automatically adopted settings of maximum flows for heating and cooling modes together with TA-Modulator and TA-Slider 160 CO, TA-Slider 160 KNX R24 or TA-Slider 160 BACnet/Modbus CO.

### Key features

#### Easy commissioning and balancing

Provides automatically adopted settings of max. flows for heating and cooling mode together with TA-Modulator and TA-Slider 160 CO, TA-Slider 160 KNX R24 or TA-Slider 160 BACnet/Modbus CO.

#### Precise flow control

Provides uniquely shaped EQM characteristic for best modulating control together with TA-Modulator.

#### Easy troubleshooting

Provides flow and differential pressure measuring for system diagnostics and pump optimization together with TA-Modulator.

#### Compact installation

Saves space by using one terminal unit for heating and cooling.

### Technical description – Valve

#### Application:

Heating and cooling systems.  
(Change-over system)

#### Functions:

Control

#### Dimensions:

DN 15-20

#### Pressure class:

PN 16

#### Max. differential pressure ( $\Delta p_V$ ):

200 kPa

#### Temperature:

Max. working temperature: 120°C  
Min. working temperature: -10°C

#### Media:

Water or neutral fluids, water-glycol mixtures (0-57%).

#### Leakage rate:

Level A (EN 12266-1/12 - P12)

#### Characteristics:

Linear, best suited for on/off control.

#### Material:

Valve body: Brass CW602N  
CuZn36Pb2As (322203-13001: Brass  
CW617N CuZn40Pb2)  
Balls: Brass CW614N CuZn39Pb3  
Spindles: Brass CW614N CuZn39Pb3  
Seats: PTFE  
O-rings: EPDM (Perox)

#### Surface treatment:

Valve body: Nickel-plated or non-plated (raw finish).  
Spindles and balls: Nickel-plated.

#### Marking:

IMI TA, PN, DN.

#### Connection:

External thread according to ISO 228.  
- Eurocone  
- Flat faced ends  
Internal thread according to ISO 228.

#### Connection to actuator:

F03 and F04 according to EN ISO 5211.

#### Angle of rotation:

90°

#### Actuators:

TA-M106, TA-M106 CO, TA-MC106Y

## Technical description – Actuator

### Functions:

Proportional control  
3-point control  
Manual override

### Supply voltage:

TA-M106/24: 24 VAC +6% -10%  
TA-M106/230: 230 VAC +6% -10%  
TA-M106 CO: 24 VAC +6% -10%  
TA-MC106Y: 24 VAC  $\pm$ 10%

### Frequency:

50/60 Hz  $\pm$ 5%.

### Power consumption:

TA-M106, TA-M106 CO: 3.5 VA  
TA-MC106Y: 3.0 VA

### Input signal:

TA-M106, TA-M106 CO: 3-point  
TA-MC106Y: 0(2)-10 VDC,  $R_i$  77 k $\Omega$ .  
(0-10, 10-0, 2-10, 10-2)

### Output signal:

TA-MC106Y: 0-10 VDC (0-10, 10-0),  
max. 8 mA, min. 1.2 k $\Omega$ .

### Actuating time:

(at 50 Hz/90°)  
TA-M106, TA-M106 CO: 130 s  
TA-MC106Y: 80 s

### Adjusting torque:

8 Nm

### Temperature:

Medium temperature: max. 80°C  
Operating environment: 0°C - +50°C

### Ingress protection:

IP43

### Protection class:

EN 60730  
24 VAC: III  
230 VAC: II

### End position switch-off:

Fixed at 90°

### Cable:

1,5 m, three wire (0,5 mm<sup>2</sup>) with wire end ferrule.  
CO version: With connector to actuator TA-Slider 160 CO or TA-Slider 160 BACnet/Modbus CO instead of wire end ferrules.

### Colour:

Orange RAL 2011, grey RAL 7043.

### Marking:

Label: IMI TA, CE, product name and technical specification.

### Connection to valve:

F04 according to EN ISO 5211.

### Angle of rotation:

90°

## Application examples

**Control via the actuator TA-Slider 160 CO, TA-Slider 160 KNX R24 or TA-Slider 160 BACnet/Modbus CO and the pressure independent control valve TA-Modulator**  
(See connection diagrams TA-Slider 160 CO + TA-M106 CO, TA-Slider 160 KNX R24 + TA-M106 and TA-Slider 160 BACnet/Modbus CO + TA-M106 CO)

- EQM valve characteristic for best modulating control.
- High valve authority thanks to pressure independent control valve.
- Automatically adopted flow settings for heating and cooling mode.
- The 6-way valve for change-over between heating and cooling.

For more details on TA-Slider actuators, see separate technical leaflets.

**Control via the actuator TA-MC106Y and the TA-6-way valve**

(See connection diagram TA-MC106Y)

- Valve characteristic best suited for on/off-control.
- Pressure independent flow settings for heating and cooling mode with the valve TA-COMPACT-P.

**Control via the actuator TA-MC106Y and the TA-6-way valve**

(See connection diagram TA-MC106Y)

- Valve characteristic best suited for on/off-control.
- Flow balancing of heating and cooling mode with the valve STAD.

**Note:** Differential pressure control with STAP/STAD is recommended in branches for pressure independent modules.

## Installation

### Flow distribution

\*) Pressure balance function: Pressure connection between port 1 and 2, at 32° to 50°, for proper pressurisation of the terminal at zero flow. **NOTE!** Any control valve should be connected to port 3.

### Pressurisation

**NOTE!** When designing the pressurisation system: please consider that change-over systems have hydraulic interaction between the cooling and the heating system via the terminals, which cause a fluid mass transfer from the cooling to the heating system. For further information please contact IMI.

### Example valve + bracket

See "Accessories"

### TA-M106, TA-M106 CO, TA-MC106Y

## Connection diagram – Terminal/Description

Terminal	Description
S	Shielding, line should be connected at one end to a specific shielding terminal connected itself to EARTH.
L24	Power supply 24 VAC
M	Neutral for power supply 24 VAC and signals
A (Data+)	Data+ (RS 485)
B (Data-)	Data- (RS 485)
Y <sub>v</sub>	Input signal for proportional control 0(2)-10 VDC, 47 kΩ
X <sub>v</sub>	Output signal 0(2)-10 VDC, max. 8 mA or min. load resistance 1.25 kΩ
B	Connection for potential free contact (e.g. open window detection), max. 100 Ω, max. 10 m cable or shielded
T1	Connection for Pt1000 temperature sensor, to be connected between T1 and M, max. 10 m total cable length between actuator and sensor head.
T2	Second connection for Pt1000 temperature sensor, to be connected between T2 and M, max. 10 m total cable length between actuator and sensor head.
COM	Common relay contact; CO version: to connect TA-M106 CO actuator. KNX R24 version: Max. 30 VAC/VDC, max. 2A on resistive load (to connect TA-M106 24 VAC 3-point, see "Connection diagram").
NC	Normally closed contact for relay
NO	Normally open contact for relay

24 VAC/VDC operating only with safety transformer according to EN 61558-2-6.

## Connection diagram

### TA-M106 3-point

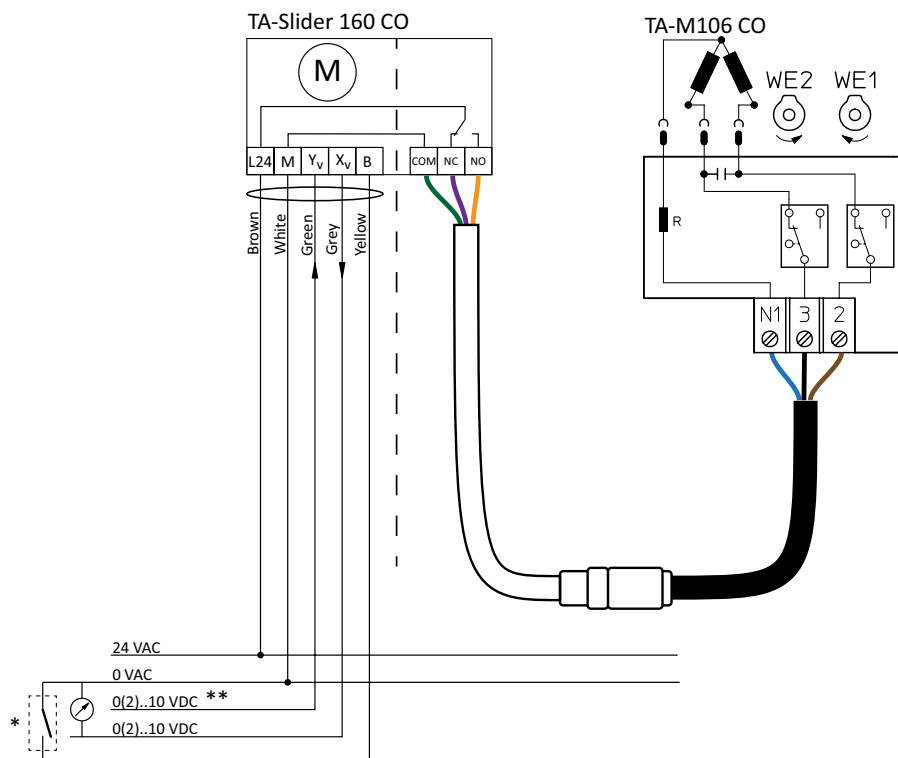

\*) Depending on TA-M106 version.

### TA-MC106Y Proportional (0(2)-10 VDC)

### TA-Slider 160 CO + TA-M106 CO (See Application example 1)

\*) Binary input can be used to toggle between heating and cooling mode as an alternative to the dual-range signal.

\*\*) Dual range signal 0-3.3/6.7-10 VDC, 2-4.7/7.3-10 VDC, 0-4.5/5.5-10 VDC or 2-5.5/6.5-10 VDC.

### Modulating control

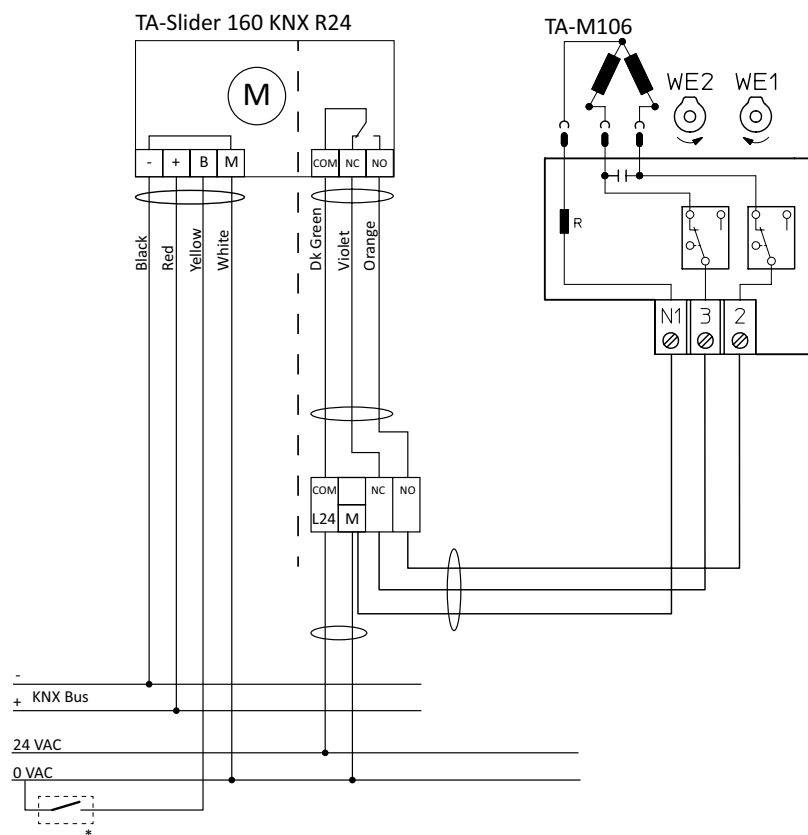

### Dual range modulating control

(See Application example 1)

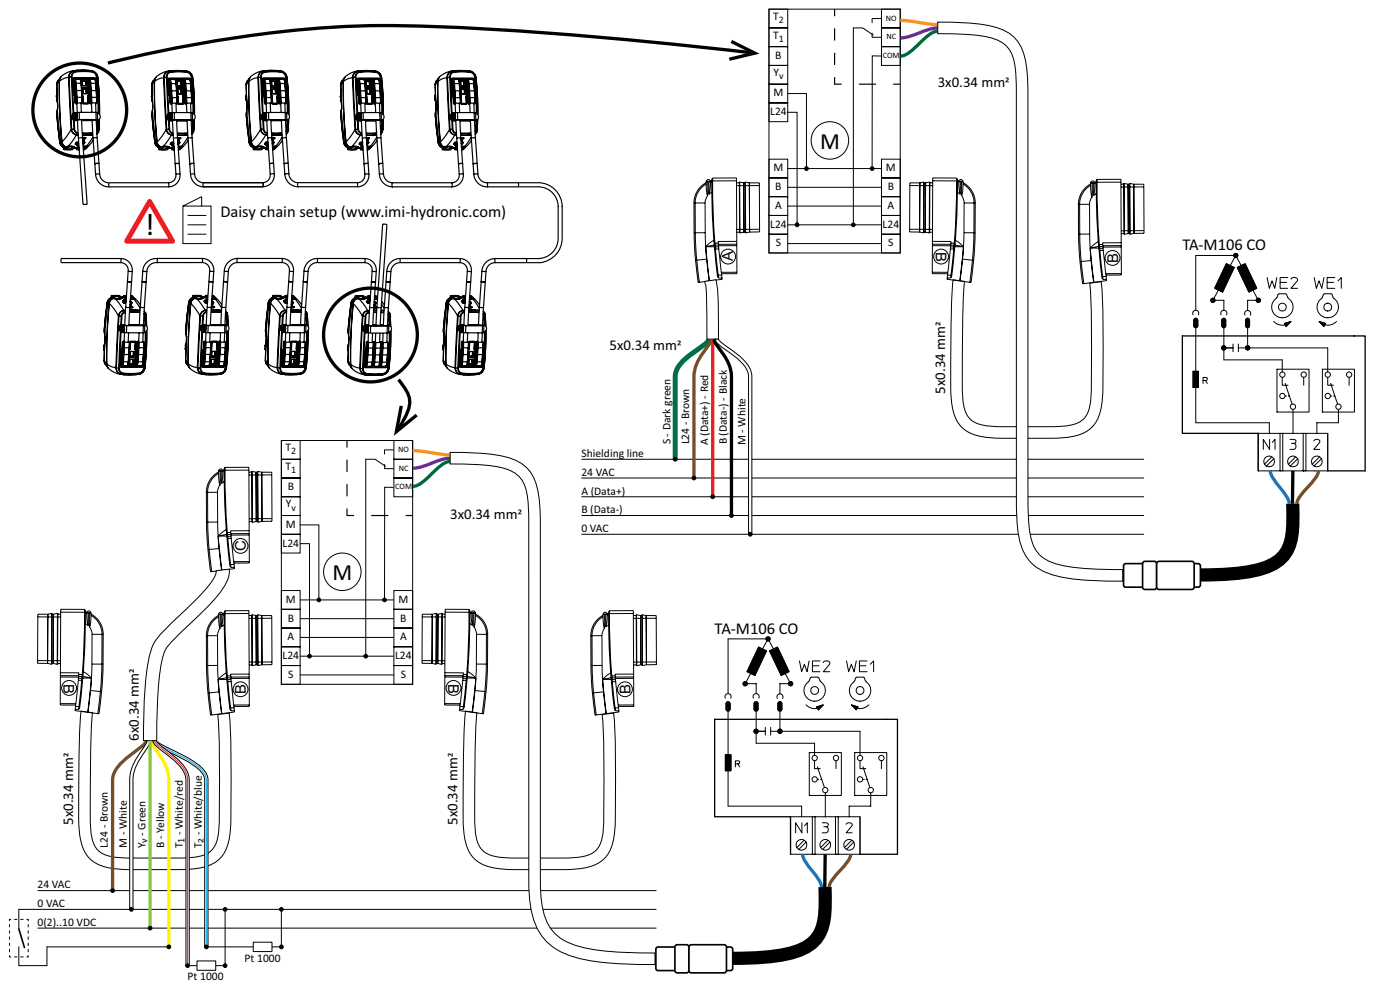

Control by KNX bus

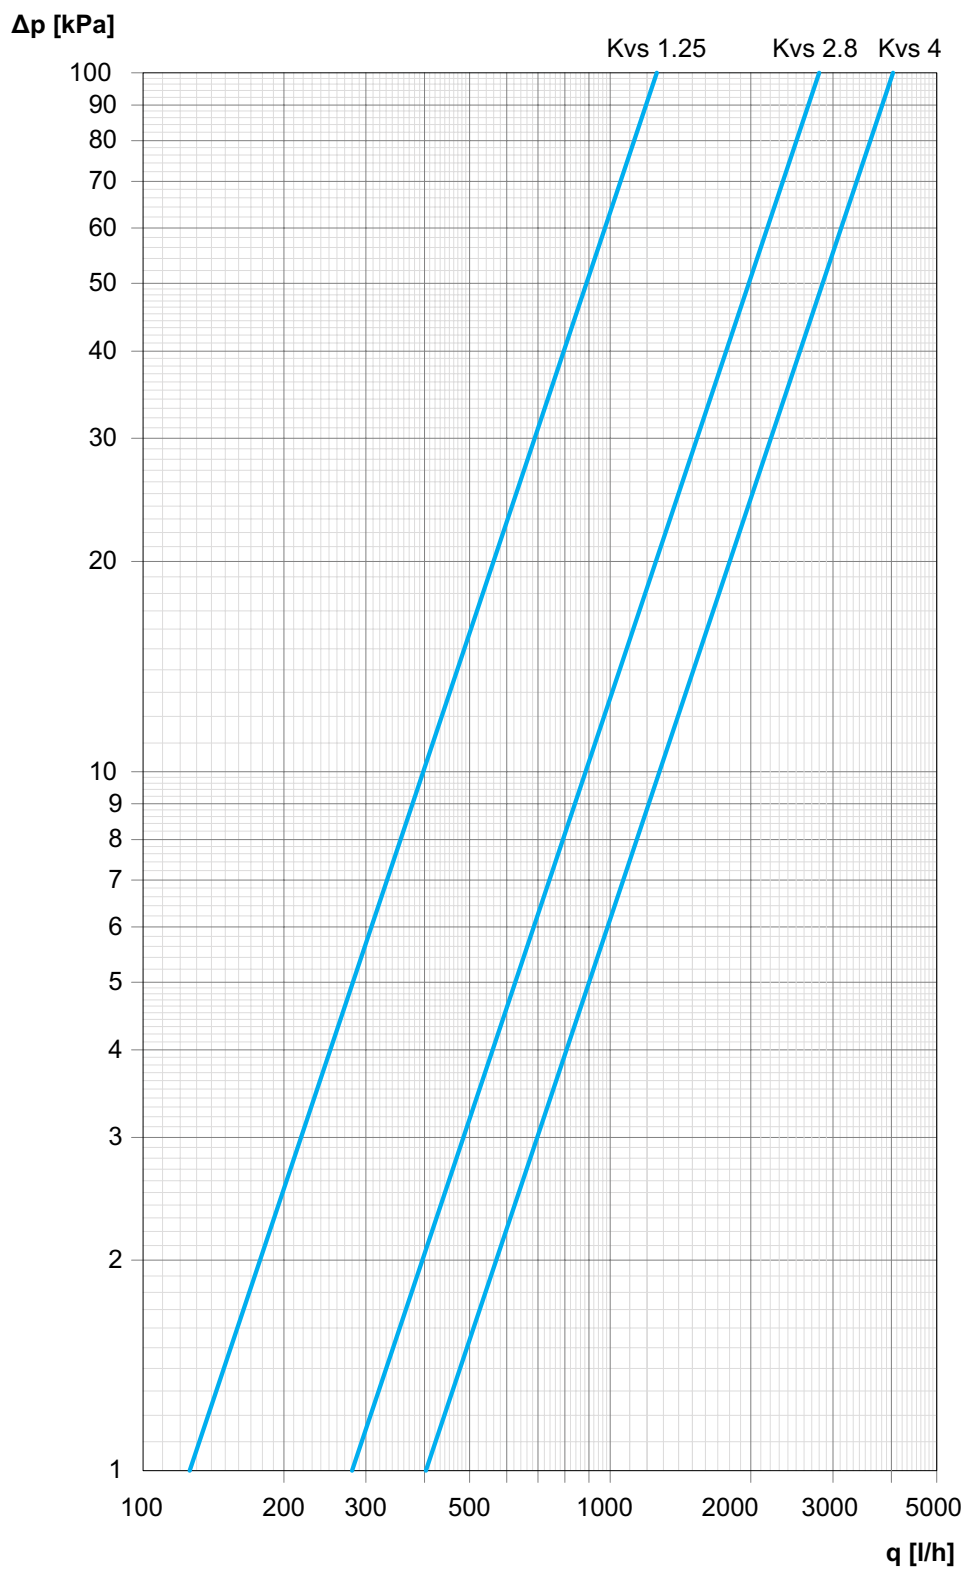

\*) Binary input can be used to toggle between heating and cooling mode as an alternative to toggling by KNX bus.

# **TA-Slider 160 BACnet/Modbus CO + TA-M106 CO** (See Application example 1)

Control by BACnet/Modbus
