TA-BVS 240/243

Balancing valves

Of stainless steel, for high media resistance

TA-BVS 240/243

A stainless steel balancing valve that delivers accurate hydronic performance in an impressive range of applications. The TA-BVS is available with flanges or welding ends and is ideal for use mainly on industrial applications and for high temperature.

Key features

Easy to operate

DN 15-50 are equipped with a precision control handwheel and allows the balancing valve to be locked to a set value, making the valve easy to adjust. DN 65-150 are equipped with a removable handle that ensures accurate and straightforward balancing. DN 200 and up are equipped with a manual gear.

Measuring points

For simple, accurate balancing.

Stainless steel

For high media resistance and longer valve lifetime.

Technical description

Application:

Heating and cooling systems

Functions:

Balancing
Pre-setting
Measuring
Shut-off

Dimensions:

DN 15-250

Pressure class:

Valve body:

DN 15-250: PN 25

Flanges:

DN 15-50: PN 25 (also fit PN 10, 16 and 40 flanges)

DN 65-250: PN 16 (PN 10, 25 and 40 on request)

Temperature:

DN 15-50:

Max. working temperature: 120°C

Min. working temperature: -20°C

Note: Not for steam.

Below -20°C contact IMI.

DN 65 and up:

Max. working temperature: 200°C

Min. working temperature: -20°C

Note: Not for steam.

Below -20°C contact IMI.

Media:

Clean media. Also suitable for industrial system with e.g. process water or glycol. For media with freezium, ethanol or methanol on request with EPDM O-rings. For more information, contact IMI.

Leakage rate:

A (EN 12266-1)

Material:

Valve body: Stainless steel

X2CrNiMo17-12-2 (EN 1.4404).

Ball: Stainless steel X2CrNiMo17-12-2

(EN 1.4404), DN 15-50 also PA-GF30.

Ball seal: Hardened PTFE+GF.

Spindle: Stainless steel

X2CrNiMo17-12-2 (EN 1.4404).

Spindle seals: FPM and NBR.

Measuring points: Stainless steel

X8CrNiS18-9 (EN 1.4305). (Optional,

stainless steel X2CrNiMo17-12-2

(EN 1.4404)).

Handwheel (DN 15-50): PA-GF50.

Handle (DN 65-150): Zinc-plated steel.

DN 200-250 with manual gear.

Marking:

Body and flanges: Traceability No.

Label on body: IMI TA, DN, PN, CE

0496* (DN 32-250), material, max.

temperature, product No and flow

direction arrow.

*) Notified body.

Flanges:

EN 1092-1, ISO 7005-1.

Construction

1. Precision control handwheel
2. Self-sealed measuring points
3. Two O-rings. The upper can be replaced during operation.
4. Ball with W-port flow tube. Equal percentage valve characteristic.

1. Locking screw
2. Measuring points
3. Removable handle
4. Two O-rings. The upper can be replaced during operation.
5. Ball with W-port flow tube. Equal percentage valve characteristic.

Measuring accuracy

Deviation of flow at different settings

The curve is valid for valves with normal pipe fittings. Try also to avoid mounting taps and pumps, immediately before the valve.

*) Setting.

D = Valve DN

Sizing

When Δp and the design flow are known, use the formula to calculate the Kv value or use the diagram.

$$K_v = 0,01 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/h, } \Delta p \text{ kPa}$$

$$K_v = 36 \frac{q}{\sqrt{\Delta p}} \quad q \text{ l/s, } \Delta p \text{ kPa}$$

Kv values

NOTE: New Kv values for valves DN 15-50 equipped with precision control handwheel. In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the TA-BVS, DN 15-50, is named TA-BVS*.

Kv values for DN 65 and up remain the same.

Setting

DN 15-50

1. Set the limiter (2) to the specified preset value (1).
2. Adjust the hand (3) so it rests on the edge of the limiter (2)

Note: If preset value **C** is selected, the valve will function as a shut-off valve.

DN 65-150

1. Adjust to the desired position (1).
2. Open the locking screw of the limiter (2).
3. Move the limiter against the edge of the scale plate (3).
4. Tighten the locking screw of the limiter (2).

DN 200-250

1. Adjust to the desired position (1).
