

TA-PICL

Prefabricated units

Pressure independent control loop

TA-PICL

TA-PICL is a 2-way control loop for temperature control. TA-PICL is pressure independent on the primary side and suitable in ventilation heat exchangers, radiator systems, floor heating systems etc.

Key features

- > **Pressure independent control**
The pressure independent control valve TA-Modulator ensures accurate control and independent balancing of the primary side.
- > **Easy balancing and good compatibility**
The balancing valve STAD ensures accurate and easy balancing of the secondary side.
- > **Precise temperature control**
TA-Modulator provide uniquely shaped EQM characteristic for best modulating control.
- > **Easy diagnostics**
Measuring points enables data for full system diagnostics.

Technical description

Applications:

TA-PICL is made for control loops with variable flow in primary side and constant flow in secondary side.

Functions:

Measuring (ΔH , t , q)
Shut-off
Draining

Primary side:

Control (EQM)
Pre-setting (max. flow)
Differential pressure control

Secondary side:

Balancing
Pre-setting

Dimensions:

DN 15-50

Pressure class:

All components in the product are classified to at least PN 6.

Temperature:

Max. working temperature: 90°C
Min. working temperature: -10°C
These temperature limitations are for TA-PICL. Also check the limitations of the chosen circulation pump.

Media:

Water or neutral fluids, water-glycol mixtures (0-57%).

Pump connection:

Pump connections; swivelling nut with female threads included.
DN 15-40: G1 1/2
DN 50: G2

Shut-off valves:

STS

Balancing valve:

STAD

Control valve:

TA-Modulator

Actuators:

DN 15-32: TA-Slider 160 (24 VAC/VDC; 0(2)-10 VDC).
DN 40-50: TA-Slider 500 (24 VAC/VDC; 0(2)-10 VDC).
All actuators with halogen free cable.

Thermometers:

Temperature range 0 – +120°C for heating, -40 – +40°C for cooling.

Insulation:

Heating: Non-combustible mineral wool
Cooling: Armaflex condensate insulation

Protective box:

Plastic laminated sheet metal.

Mechanical construction

General

TA-PICL is produced in sizes from DN 15 to DN 50. TA-PICL is connected by means of pipe threads.

Balancing

The secondary side is provided with the balancing valve STAD. The primary side is provided with the pressure independent control valve TA-Modulator.

Shut-off

All circuits are provided with STAD or STS with shut-off function.

Measuring

All valves included in the TA-PICL are provided with measuring points, to permit measurement of available pressure, pressure drop, flow, temperature and power in connected circuits.

Use IMI Hydronic Engineering's balancing instrument TA-SCOPE.

NOTE: In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the STAD, PN 25 version, is named STAD*.

Pump

TA-PICL is prepared for pump installation. Two premounted pump connections are included.

DN 15-40 pump DN 25.

DN 50 pump DN 32.

Insulation – box

TA-PICL is insulated as standard with non-flammable mineral wool for heating systems and with Armaflex condensation insulation for cooling systems.

External valves and couplings are not insulated.

The product has a protective box of plastic laminated sheet metal, which is easy to dismantle for inspection.

Mounting

TA-PICL is reversible for shifting primary and secondary side. A bracket for wall mounting is included as standard. A floor mounting stand is available as an option.

Type plate

A self-adhesive type plate is supplied and shall be visible fixed on the box. The type plate includes the following:

- Pos specifies the section of the installation which the control circuit serves
- Type gives the characteristic data of the product
- Year of manufacture

Document

Mounting and operating instruction is included.

Thermometers

4 thermometers are installed on each unit.

Thermometer scale:

0 – +120°C for heating.

-40 – +40°C for cooling.

Actuators

TA-Slider 160 (24 VAC/VDC) for DN 15-32 and TA-Slider 500 (24 VAC/VDC) for DN 40-50 included in TA-PICL.

All actuators with halogen free cable.

See separate technical leaflets "TA-Slider 160" and "TA-Slider 500" for more details.

Dimension sketch

*) Excl pump, face to face length.

**) Excl pump.

Correction factors

The flow calculations are valid for water (+20°C). For other liquids with approximately the same viscosity as water ($\leq 20 \text{ cSt} = 3^\circ \text{E} = 100 \text{ S.U.}$), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves. This causes

a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software HySelect or directly in our balancing instruments.

Installation

Free space is required above the actuator for easy mounting/dismounting.

Fundamental design

Variable flow in primary circuit and constant flow in secondary circuit

The flow in the secondary circuit shall be greater than or equal to the flow in the primary circuit.

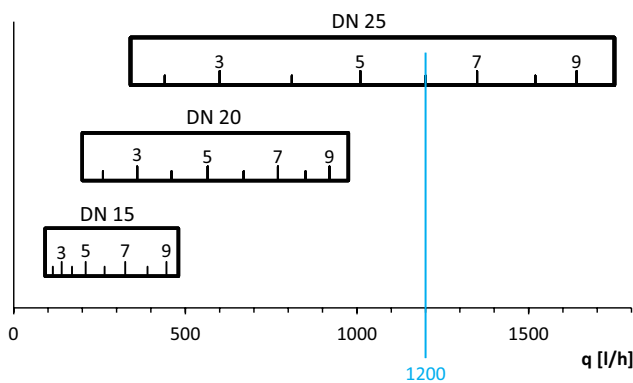

- a) Heating or cooling supply - primary
- b) Load - secondary
- c) Main pump - primary
- d) Pump - secondary

Sizing

Sizing example (1200 l/h primary and 1800 l/h secondary)

1. Choose size of TA-PICL in the diagram called "Primary side". Each dimensioning field also contains presetting values for the pressure independent control valve TA-Modulator. Strive for as high presetting value as possible.
In this case: TA-PICL DN 25, setting 6,0.
2. Check that the available differential pressure ΔH is higher than, or equal to ΔH_{min} for the chosen dimension and presetting of TA-Modulator. See "Flow tables – Primary side".
3. Use the diagram "Secondary side" for sizing of the pump on the secondary side. 1800 l/h requires a pressure drop of 17,5 kPa. Add 17,5 to the pressure drop in the secondary circuit to calculate the smallest needed pump head.
4. The chosen product is TA-PICL DN 25.

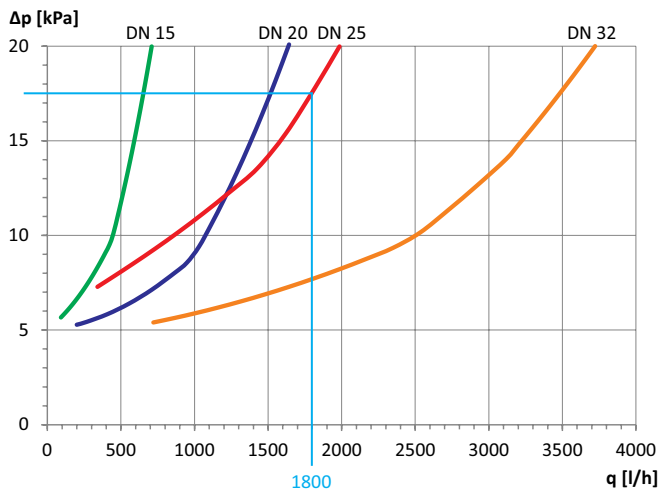

Primary side DN 15-25

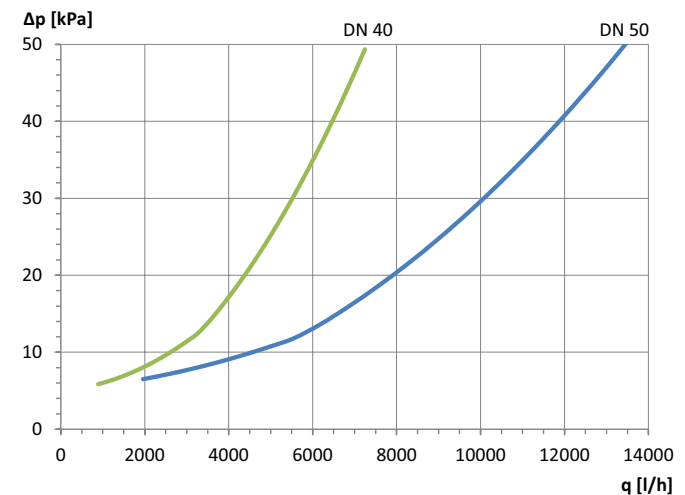

DN 32-50

Secondary side DN 15-32

DN 40-50

Note: Min. 3 kPa in STAD included in the diagram.

NOTE: In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the STAD, PN 25 version, is named STAD*.
